# Chapter 1.

## MODULES

Here is a list of all modules:

- ▶ Mathematical Functions
- ▶ Single Precision Mathematical Functions
- ▶ Double Precision Mathematical Functions
- ▶ Single Precision Ininsics
- ▶ Double Precision Ininsics
- ▶ Integer Ininsics
- ▶ Type Casting Ininsics

## 1.1. Mathematical Functions

CUDA mathematical functions are always available in device code. Some functions are also available in host code as indicated.

Note that floating-point functions are overloaded for different argument types. For example, the `log()` function has the following prototypes:

```
↑ double log(double x);  
   float log(float x);  
   float logf(float x);
```

## 1.2. Single Precision Mathematical Functions

This section describes single precision mathematical functions.

## `__device__ float acosf (float x)`

Calculate the arc cosine of the input argument.

### Returns

Result will be in radians, in the interval  $[0, \pi]$  for  $x$  inside  $[-1, +1]$ .

- ▶ `acosf(1)` returns +0.
- ▶ `acosf(x)` returns NaN for  $x$  outside  $[-1, +1]$ .

### Description

Calculate the principal value of the arc cosine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float acoshf (float x)`

Calculate the nonnegative arc hyperbolic cosine of the input argument.

### Returns

Result will be in the interval  $[0, +\infty]$ .

- ▶ `acoshf(1)` returns 0.
- ▶ `acoshf(x)` returns NaN for  $x$  in the interval  $[-\infty, 1)$ .

### Description

Calculate the nonnegative arc hyperbolic cosine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float asinf (float x)`

Calculate the arc sine of the input argument.

### Returns

Result will be in radians, in the interval  $[-\pi/2, +\pi/2]$  for  $x$  inside  $[-1, +1]$ .

- ▶ `asinf(0)` returns +0.
- ▶ `asinf(x)` returns NaN for  $x$  outside  $[-1, +1]$ .

**Description**

Calculate the principal value of the arc sine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float asinhf (float x)**

Calculate the arc hyperbolic sine of the input argument.

**Returns**

- `asinhf(0)` returns 1.

**Description**

Calculate the arc hyperbolic sine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float atan2f (float x, float y)**

Calculate the arc tangent of the ratio of first and second input arguments.

**Returns**

Result will be in radians, in the interval  $[-\pi, +\pi]$ .

- `atan2f(0, 1)` returns +0.

**Description**

Calculate the principal value of the arc tangent of the ratio of first and second input arguments  $x / y$ . The quadrant of the result is determined by the signs of inputs  $x$  and  $y$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float atanhf (float x)`

Calculate the arc tangent of the input argument.

### Returns

Result will be in radians, in the interval  $[-\pi/2, +\pi/2]$ .

- ▶ `atanf(0)` returns +0.

### Description

Calculate the principal value of the arc tangent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float atanhf (float x)`

Calculate the arc hyperbolic tangent of the input argument.

### Returns

- ▶ `atanhf(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `atanhf(  $\pm 1$  )` returns  $\pm \infty$ .
- ▶ `atanhf( $x$ )` returns NaN for  $x$  outside interval  $[-1, 1]$ .

### Description

Calculate the arc hyperbolic tangent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float cbrtf (float x)`

Calculate the cube root of the input argument.

### Returns

Returns  $x^{1/3}$ .

- ▶ `cbrtf(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `cbrtf(  $\pm \infty$  )` returns  $\pm \infty$ .

**Description**

Calculate the cube root of  $x$ ,  $x^{1/3}$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float ceilf (float x)**

Calculate ceiling of the input argument.

**Returns**

Returns  $\lceil x \rceil$  expressed as a floating-point number.

- ▶ `ceilf(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `ceilf(  $\pm \infty$  )` returns  $\pm \infty$ .

**Description**

Compute the smallest integer value not less than  $x$ .

**\_\_device\_\_ float copysignf (float x, float y)**

Create value with given magnitude, copying sign of second value.

**Returns**

Returns a value with the magnitude of  $x$  and the sign of  $y$ .

**Description**

Create a floating-point value with the magnitude  $x$  and the sign of  $y$ .

**\_\_device\_\_ float cosf (float x)**

Calculate the cosine of the input argument.

**Returns**

- ▶ `cosf(0)` returns 1.
- ▶ `cosf(  $\pm \infty$  )` returns NaN.

**Description**

Calculate the cosine of the input argument  $x$  (measured in radians).

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This function is affected by the `--use_fast_math` compiler flag. See the CUDA C Programming Guide, Appendix C, Table C-3 for a complete list of functions affected.

## `__device__ float coshf (float x)`

Calculate the hyperbolic cosine of the input argument.

### Returns

- ▶ `coshf(0)` returns 1.
- ▶ `coshf(  $\pm \infty$  )` returns NaN.

### Description

Calculate the hyperbolic cosine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float cospif (float x)`

Calculate the cosine of the input argument  $\times \pi$ .

### Returns

- ▶ `cospif(  $\pm 0$  )` returns 1.
- ▶ `cospif(  $\pm \infty$  )` returns NaN.

### Description

Calculate the cosine of  $x \times \pi$  (measured in radians), where  $x$  is the input argument.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float erfcf (float x)`

Calculate the complementary error function of the input argument.

### Returns

- ▶ `erfcf( -  $\infty$  )` returns 2.
- ▶ `erfcf( +  $\infty$  )` returns +0.

### Description

Calculate the complementary error function of the input argument  $x$ ,  $1 - \text{erf}(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float erfcinvf (float y)`

Calculate the inverse complementary error function of the input argument.

### Returns

- ▶ `erfcinvf(0)` returns +  $\infty$ .
- ▶ `erfcinvf(2)` returns -  $\infty$ .

### Description

Calculate the inverse complementary error function of the input argument  $y$ , for  $y$  in the interval  $[0, 2]$ . The inverse complementary error function find the value  $x$  that satisfies the equation  $y = \text{erfc}(x)$ , for  $0 \leq y \leq 2$ , and  $-\infty \leq x \leq \infty$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float erfcxf (float x)`

Calculate the scaled complementary error function of the input argument.

### Returns

- ▶ `erfcxf( -  $\infty$  )` returns +  $\infty$
- ▶ `erfcxf( +  $\infty$  )` returns +0
- ▶ `erfcxf( $x$ )` returns +  $\infty$  if the correctly calculated value is outside the single floating point range.

**Description**

Calculate the scaled complementary error function of the input argument  $x$ ,  $e^{x^2} \cdot \text{erfc}(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float erff (float x)**

Calculate the error function of the input argument.

**Returns**

- ▶  $\text{erff}(\pm 0)$  returns  $\pm 0$ .
- ▶  $\text{erff}(\pm \infty)$  returns  $\pm 1$ .

**Description**

Calculate the value of the error function for the input argument  $x$ ,  $\frac{2}{\sqrt{\pi}} \int_0^x e^{-t^2} dt$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float erfinvf (float y)**

Calculate the inverse error function of the input argument.

**Returns**

- ▶  $\text{erfinvf}(1)$  returns  $+\infty$ .
- ▶  $\text{erfinvf}(-1)$  returns  $-\infty$ .

**Description**

Calculate the inverse error function of the input argument  $y$ , for  $y$  in the interval  $[-1, 1]$ . The inverse error function finds the value  $x$  that satisfies the equation  $y = \text{erf}(x)$ , for  $-1 \leq y \leq 1$ , and  $-\infty \leq x \leq \infty$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float exp10f (float x)`

Calculate the base 10 exponential of the input argument.

### Returns

Returns  $10^x$ .

### Description

Calculate the base 10 exponential of the input argument  $x$ .

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- This function is affected by the `--use_fast_math` compiler flag. See the CUDA C Programming Guide, Appendix C, Table C-3 for a complete list of functions affected.

## `__device__ float exp2f (float x)`

Calculate the base 2 exponential of the input argument.

### Returns

Returns  $2^x$ .

### Description

Calculate the base 2 exponential of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float expf (float x)`

Calculate the base  $e$  exponential of the input argument.

### Returns

Returns  $e^x$ .

### Description

Calculate the base  $e$  exponential of the input argument  $x$ ,  $e^x$ .

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This function is affected by the `--use_fast_math` compiler flag. See the CUDA C Programming Guide, Appendix C, Table C-3 for a complete list of functions affected.

## `__device__ float expm1f (float x)`

Calculate the base  $e$  exponential of the input argument, minus 1.

### Returns

Returns  $e^x - 1$ .

### Description

Calculate the base  $e$  exponential of the input argument  $x$ , minus 1.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float fabsf (float x)`

Calculate the absolute value of its argument.

### Returns

Returns the absolute value of its argument.

- ▶ `fabs(  $\pm \infty$  )` returns  $+\infty$ .
- ▶ `fabs(  $\pm 0$  )` returns 0.

### Description

Calculate the absolute value of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## \_\_device\_\_ float fdimf (float x, float y)

Compute the positive difference between  $x$  and  $y$ .

### Returns

Returns the positive difference between  $x$  and  $y$ .

- ▶ `fdimf(x, y)` returns  $x - y$  if  $x > y$ .
- ▶ `fdimf(x, y)` returns  $+0$  if  $x \leq y$ .

### Description

Compute the positive difference between  $x$  and  $y$ . The positive difference is  $x - y$  when  $x > y$  and  $+0$  otherwise.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## \_\_device\_\_ float fdividef (float x, float y)

Divide two floating point values.

### Returns

Returns  $x / y$ .

### Description

Compute  $x$  divided by  $y$ . If `--use_fast_math` is specified, use `__fdividef()` for higher performance, otherwise use normal division.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This function is affected by the `--use_fast_math` compiler flag. See the CUDA C Programming Guide, Appendix C, Table C-3 for a complete list of functions affected.

## \_\_device\_\_ float floorf (float x)

Calculate the largest integer less than or equal to  $x$ .

### Returns

Returns  $\log_e(1+x)$  expressed as a floating-point number.

- ▶ `floorf(  $\pm \infty$  )` returns  $\pm \infty$ .
- ▶ `floorf(  $\pm 0$  )` returns  $\pm 0$ .

### Description

Calculate the largest integer value which is less than or equal to  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float fmaf (float x, float y, float z)`

Compute  $x \times y + z$  as a single operation.

### Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ ,  $z$  )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ ,  $z$  )` returns NaN.
- ▶ `fmaf( $x$ ,  $y$ ,  $-\infty$  )` returns NaN if  $x \times y$  is an exact  $+\infty$ .
- ▶ `fmaf( $x$ ,  $y$ ,  $+\infty$  )` returns NaN if  $x \times y$  is an exact  $-\infty$ .

### Description

Compute the value of  $x \times y + z$  as a single ternary operation. After computing the value to infinite precision, the value is rounded once.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float fmaxf (float x, float y)`

Determine the maximum numeric value of the arguments.

### Returns

Returns the maximum numeric values of the arguments  $x$  and  $y$ .

- ▶ If both arguments are NaN, returns NaN.
- ▶ If one argument is NaN, returns the numeric argument.

## Description

Determines the maximum numeric value of the arguments  $x$  and  $y$ . Treats NaN arguments as missing data. If one argument is a NaN and the other is legitimate numeric value, the numeric value is chosen.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float fminf (float x, float y)`

Determine the minimum numeric value of the arguments.

## Returns

Returns the minimum numeric values of the arguments  $x$  and  $y$ .

- ▶ If both arguments are NaN, returns NaN.
- ▶ If one argument is NaN, returns the numeric argument.

## Description

Determines the minimum numeric value of the arguments  $x$  and  $y$ . Treats NaN arguments as missing data. If one argument is a NaN and the other is legitimate numeric value, the numeric value is chosen.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float fmodf (float x, float y)`

Calculate the floating-point remainder of  $x / y$ .

## Returns

- ▶ Returns the floating point remainder of  $x / y$ .
- ▶ `fmodf(  $\pm 0$ ,  $y$  )` returns  $\pm 0$  if  $y$  is not zero.
- ▶ `fmodf( $x$ ,  $y$ )` returns NaN and raised an invalid floating point exception if  $x$  is  $\pm \infty$  or  $y$  is zero.
- ▶ `fmodf( $x$ ,  $y$ )` returns zero if  $y$  is zero or the result would overflow.
- ▶ `fmodf( $x$ ,  $\pm \infty$ )` returns  $x$  if  $x$  is finite.
- ▶ `fmodf( $x$ , 0)` returns NaN.

## Description

Calculate the floating-point remainder of  $x / y$ . The absolute value of the computed value is always less than  $y$ 's absolute value and will have the same sign as  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float frexpf (float x, int *nptr)`

Extract mantissa and exponent of a floating-point value.

## Returns

Returns the fractional component  $m$ .

- ▶ `frexpf(0, nptr)` returns 0 for the fractional component and zero for the integer component.
- ▶ `frexpf( $\pm 0$ , nptr)` returns  $\pm 0$  and stores zero in the location pointed to by `nptr`.
- ▶ `frexpf( $\pm \infty$ , nptr)` returns  $\pm \infty$  and stores an unspecified value in the location to which `nptr` points.
- ▶ `frexpf(NaN, y)` returns a NaN and stores an unspecified value in the location to which `nptr` points.

## Description

Decomposes the floating-point value  $x$  into a component  $m$  for the normalized fraction element and another term  $n$  for the exponent. The absolute value of  $m$  will be greater than or equal to 0.5 and less than 1.0 or it will be equal to 0;  $x = m \cdot 2^n$ . The integer exponent  $n$  will be stored in the location to which `nptr` points.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float hypotf (float x, float y)`

Calculate the square root of the sum of squares of two arguments.

## Returns

Returns the length of the hypotenuse  $\sqrt{x^2 + y^2}$ . If the correct value would overflow, returns  $+\infty$ . If the correct value would underflow, returns 0.

**Description**

Calculates the length of the hypotenuse of a right triangle whose two sides have lengths  $x$  and  $y$  without undue overflow or underflow.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ int ilogbf (float x)**

Compute the unbiased integer exponent of the argument.

**Returns**

- ▶ If successful, returns the unbiased exponent of the argument.
- ▶ `ilogbf(0)` returns `INT_MIN`.
- ▶ `ilogbf(NaN)` returns `NaN`.
- ▶ `ilogbf(x)` returns `INT_MAX` if  $x$  is  $\infty$  or the correct value is greater than `INT_MAX`.
- ▶ `ilogbf(x)` return `INT_MIN` if the correct value is less than `INT_MIN`.

**Description**

Calculates the unbiased integer exponent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ int isfinite (float a)**

Determine whether argument is finite.

**Returns**

Returns a nonzero value if and only if  $a$  is a finite value.

**Description**

Determine whether the floating-point value  $a$  is a finite value (zero, subnormal, or normal and not infinity or NaN).

## `__device__ int isinf (float a)`

Determine whether argument is infinite.

### Returns

Returns a nonzero value if and only if *a* is a infinite value.

### Description

Determine whether the floating-point value *a* is an infinite value (positive or negative).

## `__device__ int isnan (float a)`

Determine whether argument is a NaN.

### Returns

Returns a nonzero value if and only if *a* is a NaN value.

### Description

Determine whether the floating-point value *a* is a NaN.

## `__device__ float j0f (float x)`

Calculate the value of the Bessel function of the first kind of order 0 for the input argument.

### Returns

Returns the value of the Bessel function of the first kind of order 0.

- ▶ `j0f( ± ∞ )` returns +0.
- ▶ `j0f(NaN)` returns NaN.

### Description

Calculate the value of the Bessel function of the first kind of order 0 for the input argument *x*,  $J_0(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float j1f (float x)`

Calculate the value of the Bessel function of the first kind of order 1 for the input argument.

### Returns

Returns the value of the Bessel function of the first kind of order 1.

- ▶ `j1f( ± 0 )` returns  $\pm 0$ .
- ▶ `j1f( ± ∞ )` returns  $+0$ .
- ▶ `j1f(NaN)` returns NaN.

### Description

Calculate the value of the Bessel function of the first kind of order 1 for the input argument  $x$ ,  $J_1(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float jnf (int n, float x)`

Calculate the value of the Bessel function of the first kind of order  $n$  for the input argument.

### Returns

Returns the value of the Bessel function of the first kind of order  $n$ .

- ▶ `jnf(n, NaN)` returns NaN.
- ▶ `jnf(n, x)` returns NaN for  $n < 0$ .
- ▶ `jnf(n, + ∞ )` returns  $+0$ .

### Description

Calculate the value of the Bessel function of the first kind of order  $n$  for the input argument  $x$ ,  $J_n(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float ldexpf (float x, int exp)`

Calculate the value of  $x \cdot 2^{\text{exp}}$ .

### Returns

- `ldexpf(x)` returns  $\pm \infty$  if the correctly calculated value is outside the single floating point range.

### Description

Calculate the value of  $x \cdot 2^{\text{exp}}$  of the input arguments `x` and `exp`.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float lgammaf (float x)`

Calculate the natural logarithm of the absolute value of the gamma function of the input argument.

### Returns

- `lgammaf(1)` returns +0.
- `lgammaf(2)` returns +0.
- `lgammaf(x)` returns  $\pm \infty$  if the correctly calculated value is outside the single floating point range.
- `lgammaf(x)` returns  $+\infty$  if  $x \leq 0$ .
- `lgammaf(  $-\infty$  )` returns  $-\infty$ .
- `lgammaf(  $+\infty$  )` returns  $+\infty$ .

### Description

Calculate the natural logarithm of the absolute value of the gamma function of the input argument `x`, namely the value of  $\log_e \left| \int_0^\infty e^{-t} t^{x-1} dt \right|$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ long long int llrintf (float x)`

Round input to nearest integer value.

### Returns

Returns rounded integer value.

### Description

Round  $x$  to the nearest integer value, with halfway cases rounded towards zero. If the result is outside the range of the return type, the result is undefined.

## `__device__ long long int llroundf (float x)`

Round to nearest integer value.

### Returns

Returns rounded integer value.

### Description

Round  $x$  to the nearest integer value, with halfway cases rounded away from zero. If the result is outside the range of the return type, the result is undefined.

This function may be slower than alternate rounding methods. See [llrintf\(\)](#).

## `__device__ float log10f (float x)`

Calculate the base 10 logarithm of the input argument.

### Returns

- ▶  $\log_{10}f(\pm 0)$  returns  $-\infty$ .
- ▶  $\log_{10}f(1)$  returns  $+0$ .
- ▶  $\log_{10}f(x)$  returns NaN for  $x < 0$ .
- ▶  $\log_{10}f(+\infty)$  returns  $+\infty$ .

### Description

Calculate the base 10 logarithm of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float log1pf (float x)`

Calculate the value of  $\log_e(1+x)$ .

### Returns

- ▶ `log1pf( ±0 )` returns  $-\infty$ .
- ▶ `log1pf(-1)` returns +0.
- ▶ `log1pf(x)` returns NaN for  $x < -1$ .
- ▶ `log1pf( +∞ )` returns  $+\infty$ .

### Description

Calculate the value of  $\log_e(1+x)$  of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float log2f (float x)`

Calculate the base 2 logarithm of the input argument.

### Returns

- ▶ `log2f( ±0 )` returns  $-\infty$ .
- ▶ `log2f(1)` returns +0.
- ▶ `log2f(x)` returns NaN for  $x < 0$ .
- ▶ `log2f( +∞ )` returns  $+\infty$ .

### Description

Calculate the base 2 logarithm of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float logbf (float x)`

Calculate the floating point representation of the exponent of the input argument.

### Returns

- ▶ `logbf ±0` returns  $-\infty$
- ▶ `logbf +∞` returns  $+\infty$

**Description**

Calculate the floating point representation of the exponent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float logf (float x)**

Calculate the natural logarithm of the input argument.

**Returns**

- ▶  $\text{logf}(\pm 0)$  returns  $-\infty$ .
- ▶  $\text{logf}(1)$  returns  $+0$ .
- ▶  $\text{logf}(x)$  returns NaN for  $x < 0$ .
- ▶  $\text{logf}(+\infty)$  returns  $+\infty$ .

**Description**

Calculate the natural logarithm of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ long int lrintf (float x)**

Round input to nearest integer value.

**Returns**

Returns rounded integer value.

**Description**

Round  $x$  to the nearest integer value, with halfway cases rounded towards zero. If the result is outside the range of the return type, the result is undefined.

**\_\_device\_\_ long int lroundf (float x)**

Round to nearest integer value.

**Returns**

Returns rounded integer value.

## Description

Round  $x$  to the nearest integer value, with halfway cases rounded away from zero. If the result is outside the range of the return type, the result is undefined.

This function may be slower than alternate rounding methods. See [lrintf\(\)](#).

## \_\_device\_\_ float modff (float x, float \*iptr)

Break down the input argument into fractional and integral parts.

### Returns

- ▶ `modff(  $\pm x$ , iptr)` returns a result with the same sign as  $x$ .
- ▶ `modff(  $\pm \infty$ , iptr)` returns  $\pm 0$  and stores  $\pm \infty$  in the object pointed to by `iptr`.
- ▶ `modff(NaN, iptr)` stores a NaN in the object pointed to by `iptr` and returns a NaN.

## Description

Break down the argument  $x$  into fractional and integral parts. The integral part is stored in the argument `iptr`. Fractional and integral parts are given the same sign as the argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## \_\_device\_\_ float nanf (const char \*tagp)

Returns "Not a Number" value.

### Returns

- ▶ `nanf(tagp)` returns NaN.

## Description

Return a representation of a quiet NaN. Argument `tagp` selects one of the possible representations.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float nearbyintf (float x)`

Round the input argument to the nearest integer.

### Returns

- ▶ `nearbyintf(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `nearbyintf(  $\pm \infty$  )` returns  $\pm \infty$ .

### Description

Round argument  $x$  to an integer value in single precision floating-point format.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float nextafterf (float x, float y)`

Return next representable single-precision floating-point value after argument.

### Returns

- ▶ `nextafterf(  $\pm \infty$ ,  $y$  )` returns  $\pm \infty$ .

### Description

Calculate the next representable single-precision floating-point value following  $x$  in the direction of  $y$ . For example, if  $y$  is greater than  $x$ , `nextafterf()` returns the smallest representable number greater than  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float normcdf (float y)`

Calculate the standard normal cumulative distribution function.

### Returns

- ▶ `normcdf(  $+\infty$  )` returns 1
- ▶ `normcdf(  $-\infty$  )` returns +0

## Description

Calculate the cumulative distribution function of the standard normal distribution for input argument  $y$ ,  $\Phi(y)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float normcdfinvf (float y)`

Calculate the inverse of the standard normal cumulative distribution function.

## Returns

- ▶ `normcdfinvf(0)` returns  $-\infty$ .
- ▶ `normcdfinvf(1)` returns  $+\infty$ .
- ▶ `normcdfinvf(x)` returns NaN if  $x$  is not in the interval  $[0,1]$ .

## Description

Calculate the inverse of the standard normal cumulative distribution function for input argument  $y$ ,  $\Phi^{-1}(y)$ . The function is defined for input values in the interval  $(0, 1)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float powf (float x, float y)`

Calculate the value of first argument to the power of second argument.

## Returns

- ▶ `powf(  $\pm 0$ ,  $y$  )` returns  $\pm \infty$  for  $y$  an integer less than 0.
- ▶ `powf(  $\pm 0$ ,  $y$  )` returns  $\pm 0$  for  $y$  an odd integer greater than 0.
- ▶ `powf(  $\pm 0$ ,  $y$  )` returns +0 for  $y > 0$  and not an odd integer.
- ▶ `powf(-1,  $\pm \infty$  )` returns 1.
- ▶ `powf(+1,  $y$  )` returns 1 for any  $y$ , even a NaN.
- ▶ `powf( $x$ ,  $\pm 0$  )` returns 1 for any  $x$ , even a NaN.
- ▶ `powf( $x$ ,  $y$  )` returns a NaN for finite  $x < 0$  and finite non-integer  $y$ .
- ▶ `powf( $x$ ,  $-\infty$  )` returns  $+\infty$  for  $|x| < 1$ .
- ▶ `powf( $x$ ,  $-\infty$  )` returns +0 for  $|x| > 1$ .
- ▶ `powf( $x$ ,  $+\infty$  )` returns +0 for  $|x| < 1$ .
- ▶ `powf( $x$ ,  $+\infty$  )` returns  $+\infty$  for  $|x| > 1$ .

- ▶ `powf( -∞, y)` returns -0 for  $y$  an odd integer less than 0.
- ▶ `powf( -∞, y)` returns +0 for  $y < 0$  and not an odd integer.
- ▶ `powf( -∞, y)` returns  $-\infty$  for  $y$  an odd integer greater than 0.
- ▶ `powf( -∞, y)` returns  $+\infty$  for  $y > 0$  and not an odd integer.
- ▶ `powf( +∞, y)` returns +0 for  $y < 0$ .
- ▶ `powf( +∞, y)` returns  $+\infty$  for  $y > 0$ .

### Description

Calculate the value of  $x$  to the power of  $y$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float rcbrtf (float x)`

Calculate reciprocal cube root function.

### Returns

- ▶ `rcbrt( ±0 )` returns  $\pm\infty$ .
- ▶ `rcbrt( ±∞ )` returns  $\pm 0$ .

### Description

Calculate reciprocal cube root function of  $x$

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float remainderf (float x, float y)`

Compute single-precision floating-point remainder.

### Returns

- ▶ `remainderf(x, 0)` returns NaN.
- ▶ `remainderf( ±∞, y)` returns NaN.
- ▶ `remainderf(x, ±∞)` returns  $x$  for finite  $x$ .

### Description

Compute single-precision floating-point remainder  $r$  of dividing  $x$  by  $y$  for nonzero  $y$ . Thus  $r = x - ny$ . The value  $n$  is the integer value nearest  $\frac{x}{y}$ . In the case when  $|n - \frac{x}{y}| = \frac{1}{2}$ , the even  $n$  value is chosen.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float remquof (float x, float y, int *quo)`

Compute single-precision floating-point remainder and part of quotient.

### Returns

Returns the remainder.

- ▶ `remquof(x, 0, quo)` returns NaN.
- ▶ `remquof(±∞, y, quo)` returns NaN.
- ▶ `remquof(x, ±∞, quo)` returns  $x$ .

### Description

Compute a double-precision floating-point remainder in the same way as the `remainderf()` function. Argument `quo` returns part of quotient upon division of  $x$  by  $y$ . Value `quo` has the same sign as  $\frac{x}{y}$  and may not be the exact quotient but agrees with the exact quotient in the low order 3 bits.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float rintf (float x)`

Round input to nearest integer value in floating-point.

### Returns

Returns rounded integer value.

### Description

Round  $x$  to the nearest integer value in floating-point format, with halfway cases rounded towards zero.

## `__device__ float roundf (float x)`

Round to nearest integer value in floating-point.

### Returns

Returns rounded integer value.

### Description

Round  $x$  to the nearest integer value in floating-point format, with halfway cases rounded away from zero.

This function may be slower than alternate rounding methods. See [rintf\(\)](#).

## `__device__ float rsqrtf (float x)`

Calculate the reciprocal of the square root of the input argument.

### Returns

Returns  $1/\sqrt{x}$ .

- ▶ `rsqrtf( +∞ )` returns `+0`.
- ▶ `rsqrtf( ±0 )` returns  $\pm\infty$ .
- ▶ `rsqrtf(x)` returns NaN if  $x$  is less than 0.

### Description

Calculate the reciprocal of the nonnegative square root of  $x$ ,  $1/\sqrt{x}$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float scalblnf (float x, long int n)`

Scale floating-point input by integer power of two.

### Returns

Returns  $x * 2^n$ .

- ▶ `scalblnf( ±0, n )` returns  $\pm 0$ .
- ▶ `scalblnf(x, 0)` returns  $x$ .

- ▶ `scalbnf(  $\pm \infty$ , n)` returns  $\pm \infty$ .

### Description

Scale  $x$  by  $2^n$  by efficient manipulation of the floating-point exponent.

## `__device__ float scalbnf (float x, int n)`

Scale floating-point input by integer power of two.

### Returns

Returns  $x * 2^n$ .

- ▶ `scalbnf(  $\pm 0$ , n)` returns  $\pm 0$ .
- ▶ `scalbnf(x, 0)` returns  $x$ .
- ▶ `scalbnf(  $\pm \infty$ , n)` returns  $\pm \infty$ .

### Description

Scale  $x$  by  $2^n$  by efficient manipulation of the floating-point exponent.

## `__device__ int signbit (float a)`

Return the sign bit of the input.

### Returns

Returns a nonzero value if and only if  $a$  is negative. Reports the sign bit of all values including infinities, zeros, and NaNs.

### Description

Determine whether the floating-point value  $a$  is negative.

## `__device__ void sincosf (float x, float *sptr, float *cptr)`

Calculate the sine and cosine of the first input argument.

### Returns

- ▶ none

### Description

Calculate the sine and cosine of the first input argument  $x$  (measured in radians). The results for sine and cosine are written into the second argument, `sptr`, and, respectively, third argument, `cptr`.

**See also:**

[sinf\(\)](#) and [cosf\(\)](#).

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- This function is affected by the `--use_fast_math` compiler flag. See the CUDA C Programming Guide, Appendix C, Table C-3 for a complete list of functions affected.

## `__device__ void sincospif (float x, float *sptr, float *cptr)`

Calculate the sine and cosine of the first input argument  $\times \pi$ .

**Returns**

- none

**Description**

Calculate the sine and cosine of the first input argument,  $x$  (measured in radians),  $\times \pi$ . The results for sine and cosine are written into the second argument, `sptr`, and, respectively, third argument, `cptr`.

**See also:**

[sinpif\(\)](#) and [cospif\(\)](#).

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float sinf (float x)`

Calculate the sine of the input argument.

**Returns**

- `sinf(  $\pm 0$  )` returns  $\pm 0$ .
- `sinf(  $\pm \infty$  )` returns NaN.

**Description**

Calculate the sine of the input argument  $x$  (measured in radians).

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This function is affected by the `--use_fast_math` compiler flag. See the CUDA C Programming Guide, Appendix C, Table C-3 for a complete list of functions affected.

## `__device__ float sinhf (float x)`

Calculate the hyperbolic sine of the input argument.

### Returns

- ▶ `sinhf( ± 0 )` returns  $\pm 0$ .
- ▶ `sinhf( ± ∞ )` returns NaN.

### Description

Calculate the hyperbolic sine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float sinpif (float x)`

Calculate the sine of the input argument  $x \times \pi$ .

### Returns

- ▶ `sinpif( ± 0 )` returns  $\pm 0$ .
- ▶ `sinpif( ± ∞ )` returns NaN.

### Description

Calculate the sine of  $x \times \pi$  (measured in radians), where  $x$  is the input argument.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float sqrtf (float x)`

Calculate the square root of the input argument.

### Returns

Returns  $\sqrt{x}$ .

- ▶ `sqrtf( ± 0 )` returns  $\pm 0$ .
- ▶ `sqrtf( + ∞ )` returns  $+\infty$ .
- ▶ `sqrtf(x)` returns NaN if  $x$  is less than 0.

### Description

Calculate the nonnegative square root of  $x$ ,  $\sqrt{x}$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float tanf (float x)`

Calculate the tangent of the input argument.

### Returns

- ▶ `tanf( ± 0 )` returns  $\pm 0$ .
- ▶ `tanf( ± ∞ )` returns NaN.

### Description

Calculate the tangent of the input argument  $x$  (measured in radians).

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This function is affected by the `--use_fast_math` compiler flag. See the CUDA C Programming Guide, Appendix C, Table C-3 for a complete list of functions affected.

## `__device__ float tanhf (float x)`

Calculate the hyperbolic tangent of the input argument.

### Returns

- ▶ `tanhf( ± 0 )` returns  $\pm 0$ .

### Description

Calculate the hyperbolic tangent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float tgammaf (float x)`

Calculate the gamma function of the input argument.

### Returns

- ▶ `tgammaf( ± 0 )` returns  $\pm \infty$ .
- ▶ `tgammaf(2)` returns  $+0$ .
- ▶ `tgammaf(x)` returns  $\pm \infty$  if the correctly calculated value is outside the single floating point range.
- ▶ `tgammaf(x)` returns NaN if  $x < 0$ .
- ▶ `tgammaf( - ∞ )` returns NaN.
- ▶ `tgammaf( + ∞ )` returns  $+\infty$ .

### Description

Calculate the gamma function of the input argument  $x$ , namely the value of  $\int_0^\infty e^{-t} t^{x-1} dt$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float truncf (float x)`

Truncate input argument to the integral part.

### Returns

Returns truncated integer value.

**Description**

Round  $x$  to the nearest integer value that does not exceed  $x$  in magnitude.

**\_\_device\_\_ float y0f (float x)**

Calculate the value of the Bessel function of the second kind of order 0 for the input argument.

**Returns**

Returns the value of the Bessel function of the second kind of order 0.

- ▶  $y0f(0)$  returns  $-\infty$ .
- ▶  $y0f(x)$  returns NaN for  $x < 0$ .
- ▶  $y0f(+\infty)$  returns +0.
- ▶  $y0f(\text{NaN})$  returns NaN.

**Description**

Calculate the value of the Bessel function of the second kind of order 0 for the input argument  $x$ ,  $Y_0(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float y1f (float x)**

Calculate the value of the Bessel function of the second kind of order 1 for the input argument.

**Returns**

Returns the value of the Bessel function of the second kind of order 1.

- ▶  $y1f(0)$  returns  $-\infty$ .
- ▶  $y1f(x)$  returns NaN for  $x < 0$ .
- ▶  $y1f(+\infty)$  returns +0.
- ▶  $y1f(\text{NaN})$  returns NaN.

**Description**

Calculate the value of the Bessel function of the second kind of order 1 for the input argument  $x$ ,  $Y_1(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float ynf (int n, float x)`

Calculate the value of the Bessel function of the second kind of order  $n$  for the input argument.

### Returns

Returns the value of the Bessel function of the second kind of order  $n$ .

- ▶ `ynf(n, x)` returns NaN for  $n < 0$ .
- ▶ `ynf(n, 0)` returns  $-\infty$ .
- ▶ `ynf(n, x)` returns NaN for  $x < 0$ .
- ▶ `ynf(n, +\infty)` returns +0.
- ▶ `ynf(n, NaN)` returns NaN.

### Description

Calculate the value of the Bessel function of the second kind of order  $n$  for the input argument  $x$ ,  $Y_n(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## 1.3. Double Precision Mathematical Functions

This section describes double precision mathematical functions.

### `__device__ double acos (double x)`

Calculate the arc cosine of the input argument.

### Returns

Result will be in radians, in the interval  $[0, \pi]$  for  $x$  inside  $[-1, +1]$ .

- ▶ `acos(1)` returns +0.
- ▶ `acos(x)` returns NaN for  $x$  outside  $[-1, +1]$ .

### Description

Calculate the principal value of the arc cosine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double acosh (double x)`

Calculate the nonnegative arc hyperbolic cosine of the input argument.

### Returns

Result will be in the interval  $[0, +\infty]$ .

- ▶ `acosh(1)` returns 0.
- ▶ `acosh(x)` returns NaN for  $x$  in the interval  $[-\infty, 1)$ .

### Description

Calculate the nonnegative arc hyperbolic cosine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double asin (double x)`

Calculate the arc sine of the input argument.

### Returns

Result will be in radians, in the interval  $[-\pi/2, +\pi/2]$  for  $x$  inside  $[-1, +1]$ .

- ▶ `asin(0)` returns +0.
- ▶ `asin(x)` returns NaN for  $x$  outside  $[-1, +1]$ .

### Description

Calculate the principal value of the arc sine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double asinh (double x)`

Calculate the arc hyperbolic sine of the input argument.

### Returns

- `asinh(0)` returns 1.

### Description

Calculate the arc hyperbolic sine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double atan (double x)`

Calculate the arc tangent of the input argument.

### Returns

Result will be in radians, in the interval  $[-\pi/2, +\pi/2]$ .

- `atan(0)` returns +0.

### Description

Calculate the principal value of the arc tangent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double atan2 (double x, double y)`

Calculate the arc tangent of the ratio of first and second input arguments.

### Returns

Result will be in radians, in the interval  $[-\pi, +\pi]$ .

- `atan2(0, 1)` returns +0.

### Description

Calculate the principal value of the arc tangent of the ratio of first and second input arguments  $x / y$ . The quadrant of the result is determined by the signs of inputs  $x$  and  $y$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double atanh (double x)`

Calculate the arc hyperbolic tangent of the input argument.

### Returns

- ▶ `atanh(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `atanh(  $\pm 1$  )` returns  $\pm \infty$ .
- ▶ `atanh(x)` returns NaN for  $x$  outside interval  $[-1, 1]$ .

### Description

Calculate the arc hyperbolic tangent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double cbrt (double x)`

Calculate the cube root of the input argument.

### Returns

Returns  $x^{1/3}$ .

- ▶ `cbrt(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `cbrt(  $\pm \infty$  )` returns  $\pm \infty$ .

### Description

Calculate the cube root of  $x$ ,  $x^{1/3}$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double ceil (double x)`

Calculate ceiling of the input argument.

### Returns

Returns  $\lceil x \rceil$  expressed as a floating-point number.

- ▶ `ceil(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `ceil(  $\pm \infty$  )` returns  $\pm \infty$ .

### Description

Compute the smallest integer value not less than  $x$ .

## `__device__ double copysign (double x, double y)`

Create value with given magnitude, copying sign of second value.

### Returns

Returns a value with the magnitude of  $x$  and the sign of  $y$ .

### Description

Create a floating-point value with the magnitude  $x$  and the sign of  $y$ .

## `__device__ double cos (double x)`

Calculate the cosine of the input argument.

### Returns

- ▶ `cos(  $\pm 0$  )` returns 1.
- ▶ `cos(  $\pm \infty$  )` returns NaN.

### Description

Calculate the cosine of the input argument  $x$  (measured in radians).

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double cosh (double x)`

Calculate the hyperbolic cosine of the input argument.

### Returns

- ▶ `cosh(0)` returns 1.
- ▶ `cosh(  $\pm \infty$  )` returns  $+\infty$ .

### Description

Calculate the hyperbolic cosine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double cospi (double x)`

Calculate the cosine of the input argument  $\times \pi$ .

### Returns

- ▶ `cospi(  $\pm 0$  )` returns 1.
- ▶ `cospi(  $\pm \infty$  )` returns NaN.

### Description

Calculate the cosine of  $x \times \pi$  (measured in radians), where  $x$  is the input argument.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double erf (double x)`

Calculate the error function of the input argument.

### Returns

- ▶ `erf(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `erf(  $\pm \infty$  )` returns  $\pm 1$ .

### Description

Calculate the value of the error function for the input argument  $x$ ,  $\frac{2}{\sqrt{\pi}} \int_0^x e^{-t^2} dt$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double erfc (double x)`

Calculate the complementary error function of the input argument.

### Returns

- ▶ `erfc(  $-\infty$  )` returns 2.

- ▶  $\text{erfc}(+\infty)$  returns +0.

### Description

Calculate the complementary error function of the input argument  $x$ ,  $1 - \text{erf}(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double erfcinv (double y)`

Calculate the inverse complementary error function of the input argument.

### Returns

- ▶  $\text{erfcinv}(0)$  returns  $+\infty$ .
- ▶  $\text{erfcinv}(2)$  returns  $-\infty$ .

### Description

Calculate the inverse complementary error function of the input argument  $y$ , for  $y$  in the interval  $[0, 2]$ . The inverse complementary error function find the value  $x$  that satisfies the equation  $y = \text{erfc}(x)$ , for  $0 \leq y \leq 2$ , and  $-\infty \leq x \leq \infty$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double erfcx (double x)`

Calculate the scaled complementary error function of the input argument.

### Returns

- ▶  $\text{erfcx}(-\infty)$  returns  $+\infty$
- ▶  $\text{erfcx}(+\infty)$  returns +0
- ▶  $\text{erfcx}(x)$  returns  $+\infty$  if the correctly calculated value is outside the double floating point range.

### Description

Calculate the scaled complementary error function of the input argument  $x$ ,  $e^{x^2} \cdot \text{erfc}(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double erfinv (double y)`

Calculate the inverse error function of the input argument.

### Returns

- ▶ `erfinv(1)` returns  $+\infty$ .
- ▶ `erfinv(-1)` returns  $-\infty$ .

### Description

Calculate the inverse error function of the input argument  $y$ , for  $y$  in the interval  $[-1, 1]$ . The inverse error function finds the value  $x$  that satisfies the equation  $y = \text{erf}(x)$ , for  $-1 \leq y \leq 1$ , and  $-\infty \leq x \leq \infty$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double exp (double x)`

Calculate the base  $e$  exponential of the input argument.

### Returns

Returns  $e^x$ .

### Description

Calculate the base  $e$  exponential of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double exp10 (double x)`

Calculate the base 10 exponential of the input argument.

### Returns

Returns  $10^x$ .

**Description**

Calculate the base 10 exponential of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double exp2 (double x)**

Calculate the base 2 exponential of the input argument.

**Returns**

Returns  $2^x$ .

**Description**

Calculate the base 2 exponential of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double expm1 (double x)**

Calculate the base  $e$  exponential of the input argument, minus 1.

**Returns**

Returns  $e^x - 1$ .

**Description**

Calculate the base  $e$  exponential of the input argument  $x$ , minus 1.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double fabs (double x)**

Calculate the absolute value of the input argument.

**Returns**

Returns the absolute value of the input argument.

- ▶ `fabs(  $\pm \infty$  )` returns  $+\infty$ .
- ▶ `fabs(  $\pm 0$  )` returns 0.

### Description

Calculate the absolute value of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double fdim (double x, double y)`

Compute the positive difference between  $x$  and  $y$ .

### Returns

Returns the positive difference between  $x$  and  $y$ .

- ▶ `fdim(x, y)` returns  $x - y$  if  $x > y$ .
- ▶ `fdim(x, y)` returns +0 if  $x \leq y$ .

### Description

Compute the positive difference between  $x$  and  $y$ . The positive difference is  $x - y$  when  $x > y$  and +0 otherwise.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ double floor (double x)`

Calculate the largest integer less than or equal to  $x$ .

### Returns

Returns  $\log_e(1+x)$  expressed as a floating-point number.

- ▶ `floor(  $\pm \infty$  )` returns  $\pm \infty$ .
- ▶ `floor(  $\pm 0$  )` returns  $\pm 0$ .

### Description

Calculates the largest integer value which is less than or equal to  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double fma (double x, double y, double z)`

Compute  $x \times y + z$  as a single operation.

### Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fma(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fma(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fma(x, y,  $-\infty$  )` returns NaN if  $x \times y$  is an exact  $+\infty$ .
- ▶ `fma(x, y,  $+\infty$  )` returns NaN if  $x \times y$  is an exact  $-\infty$ .

### Description

Compute the value of  $x \times y + z$  as a single ternary operation. After computing the value to infinite precision, the value is rounded once.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double fmax (double, double)`

Determine the maximum numeric value of the arguments.

### Returns

Returns the maximum numeric values of the arguments `x` and `y`.

- ▶ If both arguments are NaN, returns NaN.
- ▶ If one argument is NaN, returns the numeric argument.

### Description

Determines the maximum numeric value of the arguments `x` and `y`. Treats NaN arguments as missing data. If one argument is a NaN and the other is legitimate numeric value, the numeric value is chosen.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double fmin (double x, double y)`

Determine the minimum numeric value of the arguments.

### Returns

Returns the minimum numeric values of the arguments  $x$  and  $y$ .

- ▶ If both arguments are NaN, returns NaN.
- ▶ If one argument is NaN, returns the numeric argument.

### Description

Determines the minimum numeric value of the arguments  $x$  and  $y$ . Treats NaN arguments as missing data. If one argument is a NaN and the other is legitimate numeric value, the numeric value is chosen.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double fmod (double x, double y)`

Calculate the floating-point remainder of  $x / y$ .

### Returns

- ▶ Returns the floating point remainder of  $x / y$ .
- ▶  $fmod(\pm 0, y)$  returns  $\pm 0$  if  $y$  is not zero.
- ▶  $fmod(x, y)$  returns NaN and raised an invalid floating point exception if  $x$  is  $\pm \infty$  or  $y$  is zero.
- ▶  $fmod(x, y)$  returns zero if  $y$  is zero or the result would overflow.
- ▶  $fmod(x, \pm \infty)$  returns  $x$  if  $x$  is finite.
- ▶  $fmod(x, 0)$  returns NaN.

### Description

Calculate the floating-point remainder of  $x / y$ . The absolute value of the computed value is always less than  $y$ 's absolute value and will have the same sign as  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double frexp (double x, int *nptr)`

Extract mantissa and exponent of a floating-point value.

### Returns

Returns the fractional component  $m$ .

- ▶ `frexp(0, nptr)` returns 0 for the fractional component and zero for the integer component.
- ▶ `frexp( $\pm 0$ , nptr)` returns  $\pm 0$  and stores zero in the location pointed to by `nptr`.
- ▶ `frexp( $\pm \infty$ , nptr)` returns  $\pm \infty$  and stores an unspecified value in the location to which `nptr` points.
- ▶ `frexp(NaN, y)` returns a NaN and stores an unspecified value in the location to which `nptr` points.

### Description

Decompose the floating-point value  $x$  into a component  $m$  for the normalized fraction element and another term  $n$  for the exponent. The absolute value of  $m$  will be greater than or equal to 0.5 and less than 1.0 or it will be equal to 0;  $x = m \cdot 2^n$ . The integer exponent  $n$  will be stored in the location to which `nptr` points.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double hypot (double x, double y)`

Calculate the square root of the sum of squares of two arguments.

### Returns

Returns the length of the hypotenuse  $\sqrt{x^2 + y^2}$ . If the correct value would overflow, returns  $+\infty$ . If the correct value would underflow, returns 0.

### Description

Calculate the length of the hypotenuse of a right triangle whose two sides have lengths  $x$  and  $y$  without undue overflow or underflow.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ int ilogb (double x)`

Compute the unbiased integer exponent of the argument.

### Returns

- ▶ If successful, returns the unbiased exponent of the argument.
- ▶ `ilogb(0)` returns `INT_MIN`.
- ▶ `ilogb(NaN)` returns `NaN`.
- ▶ `ilogb(x)` returns `INT_MAX` if  $x$  is  $\infty$  or the correct value is greater than `INT_MAX`.
- ▶ `ilogb(x)` return `INT_MIN` if the correct value is less than `INT_MIN`.

### Description

Calculates the unbiased integer exponent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ int isfinite (double a)`

Determine whether argument is finite.

### Returns

Returns a nonzero value if and only if  $a$  is a finite value.

### Description

Determine whether the floating-point value  $a$  is a finite value (zero, subnormal, or normal and not infinity or NaN).

## `__device__ int isinf (double a)`

Determine whether argument is infinite.

### Returns

Returns a nonzero value if and only if  $a$  is a infinite value.

### Description

Determine whether the floating-point value  $a$  is an infinite value (positive or negative).

## `__device__ int isnan (double a)`

Determine whether argument is a NaN.

### Returns

Returns a nonzero value if and only if *a* is a NaN value.

### Description

Determine whether the floating-point value *a* is a NaN.

## `__device__ double j0 (double x)`

Calculate the value of the Bessel function of the first kind of order 0 for the input argument.

### Returns

Returns the value of the Bessel function of the first kind of order 0.

- ▶ `j0( ±∞ )` returns +0.
- ▶ `j0(NaN)` returns NaN.

### Description

Calculate the value of the Bessel function of the first kind of order 0 for the input argument *x*,  $J_0(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double j1 (double x)`

Calculate the value of the Bessel function of the first kind of order 1 for the input argument.

### Returns

Returns the value of the Bessel function of the first kind of order 1.

- ▶ `j1( ±0 )` returns ±0.
- ▶ `j1( ±∞ )` returns +0.
- ▶ `j1(NaN)` returns NaN.

**Description**

Calculate the value of the Bessel function of the first kind of order 1 for the input argument  $x$ ,  $J_1(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double jn (int n, double x)**

Calculate the value of the Bessel function of the first kind of order  $n$  for the input argument.

**Returns**

Returns the value of the Bessel function of the first kind of order  $n$ .

- ▶  $jn(n, \text{NaN})$  returns NaN.
- ▶  $jn(n, x)$  returns NaN for  $n < 0$ .
- ▶  $jn(n, +\infty)$  returns +0.

**Description**

Calculate the value of the Bessel function of the first kind of order  $n$  for the input argument  $x$ ,  $J_n(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double ldexp (double x, int exp)**

Calculate the value of  $x \cdot 2^{\text{exp}}$ .

**Returns**

- ▶  $ldexp(x)$  returns  $\pm \infty$  if the correctly calculated value is outside the double floating point range.

**Description**

Calculate the value of  $x \cdot 2^{\text{exp}}$  of the input arguments  $x$  and  $\text{exp}$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double lgamma (double x)`

Calculate the natural logarithm of the absolute value of the gamma function of the input argument.

### Returns

- ▶ `lgamma(1)` returns +0.
- ▶ `lgamma(2)` returns +0.
- ▶ `lgamma(x)` returns  $\pm \infty$  if the correctly calculated value is outside the double floating point range.
- ▶ `lgamma(x)` returns  $+\infty$  if  $x \leq 0$ .
- ▶ `lgamma(-\infty)` returns  $-\infty$ .
- ▶ `lgamma(+\infty)` returns  $+\infty$ .

### Description

Calculate the natural logarithm of the absolute value of the gamma function of the input argument  $x$ , namely the value of  $\log_e \left| \int_0^\infty e^{-t} t^{x-1} dt \right|$

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ long long int llrint (double x)`

Round input to nearest integer value.

### Returns

Returns rounded integer value.

### Description

Round  $x$  to the nearest integer value, with halfway cases rounded towards zero. If the result is outside the range of the return type, the result is undefined.

## `__device__ long long int llround (double x)`

Round to nearest integer value.

### Returns

Returns rounded integer value.

**Description**

Round  $x$  to the nearest integer value, with halfway cases rounded away from zero. If the result is outside the range of the return type, the result is undefined.

This function may be slower than alternate rounding methods. See [llrint\(\)](#).

**\_\_device\_\_ double log (double x)**

Calculate the base  $e$  logarithm of the input argument.

**Returns**

- ▶  $\log(\pm 0)$  returns  $-\infty$ .
- ▶  $\log(1)$  returns  $+0$ .
- ▶  $\log(x)$  returns NaN for  $x < 0$ .
- ▶  $\log(+\infty)$  returns  $+\infty$ .

**Description**

Calculate the base  $e$  logarithm of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double log10 (double x)**

Calculate the base 10 logarithm of the input argument.

**Returns**

- ▶  $\log_{10}(\pm 0)$  returns  $-\infty$ .
- ▶  $\log_{10}(1)$  returns  $+0$ .
- ▶  $\log_{10}(x)$  returns NaN for  $x < 0$ .
- ▶  $\log_{10}(+\infty)$  returns  $+\infty$ .

**Description**

Calculate the base 10 logarithm of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## \_\_device\_\_ double log1p (double x)

Calculate the value of  $\log_e(1+x)$ .

### Returns

- ▶  $\log1p(\pm 0)$  returns  $-\infty$ .
- ▶  $\log1p(-1)$  returns  $+0$ .
- ▶  $\log1p(x)$  returns NaN for  $x < -1$ .
- ▶  $\log1p(+\infty)$  returns  $+\infty$ .

### Description

Calculate the value of  $\log_e(1+x)$  of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## \_\_device\_\_ double log2 (double x)

Calculate the base 2 logarithm of the input argument.

### Returns

- ▶  $\log2(\pm 0)$  returns  $-\infty$ .
- ▶  $\log2(1)$  returns  $+0$ .
- ▶  $\log2(x)$  returns NaN for  $x < 0$ .
- ▶  $\log2(+\infty)$  returns  $+\infty$ .

### Description

Calculate the base 2 logarithm of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## \_\_device\_\_ double logb (double x)

Calculate the floating point representation of the exponent of the input argument.

### Returns

- ▶  $\logb \pm 0$  returns  $-\infty$
- ▶  $\logb \pm \infty$  returns  $+\infty$

**Description**

Calculate the floating point representation of the exponent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ long int lrint (double x)**

Round input to nearest integer value.

**Returns**

Returns rounded integer value.

**Description**

Round  $x$  to the nearest integer value, with halfway cases rounded towards zero. If the result is outside the range of the return type, the result is undefined.

**\_\_device\_\_ long int lround (double x)**

Round to nearest integer value.

**Returns**

Returns rounded integer value.

**Description**

Round  $x$  to the nearest integer value, with halfway cases rounded away from zero. If the result is outside the range of the return type, the result is undefined.

This function may be slower than alternate rounding methods. See [lrint\(\)](#).

**\_\_device\_\_ double modf (double x, double \*iptr)**

Break down the input argument into fractional and integral parts.

**Returns**

- ▶ `modf(  $\pm x$ , iptr)` returns a result with the same sign as  $x$ .
- ▶ `modf(  $\pm \infty$ , iptr)` returns  $\pm 0$  and stores  $\pm \infty$  in the object pointed to by `iptr`.
- ▶ `modf(NaN, iptr)` stores a NaN in the object pointed to by `iptr` and returns a NaN.

## Description

Break down the argument  $x$  into fractional and integral parts. The integral part is stored in the argument `iptr`. Fractional and integral parts are given the same sign as the argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double nan (const char *tagp)`

Returns "Not a Number" value.

## Returns

- ▶ `nan(tagp)` returns NaN.

## Description

Return a representation of a quiet NaN. Argument `tagp` selects one of the possible representations.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double nearbyint (double x)`

Round the input argument to the nearest integer.

## Returns

- ▶ `nearbyint(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `nearbyint(  $\pm \infty$  )` returns  $\pm \infty$ .

## Description

Round argument  $x$  to an integer value in double precision floating-point format.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double nextafter (double x, double y)`

Return next representable double-precision floating-point value after argument.

### Returns

- ▶ `nextafter(  $\pm \infty$ , y )` returns  $\pm \infty$ .

### Description

Calculate the next representable double-precision floating-point value following  $x$  in the direction of  $y$ . For example, if  $y$  is greater than  $x$ , `nextafter()` returns the smallest representable number greater than  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double normcdf (double y)`

Calculate the standard normal cumulative distribution function.

### Returns

- ▶ `normcdf(  $+\infty$  )` returns 1
- ▶ `normcdf(  $-\infty$  )` returns +0

### Description

Calculate the cumulative distribution function of the standard normal distribution for input argument  $y$ ,  $\Phi(y)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double normcdfinv (double y)`

Calculate the inverse of the standard normal cumulative distribution function.

### Returns

- ▶ `normcdfinv(0)` returns  $-\infty$ .
- ▶ `normcdfinv(1)` returns  $+\infty$ .
- ▶ `normcdfinv(x)` returns NaN if  $x$  is not in the interval  $[0,1]$ .

## Description

Calculate the inverse of the standard normal cumulative distribution function for input argument  $y$ ,  $\Phi^{-1}(y)$ . The function is defined for input values in the interval (0, 1).

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double pow (double x, double y)`

Calculate the value of first argument to the power of second argument.

## Returns

- ▶ `pow( ±0, y)` returns  $\pm \infty$  for  $y$  an integer less than 0.
- ▶ `pow( ±0, y)` returns  $\pm 0$  for  $y$  an odd integer greater than 0.
- ▶ `pow( ±0, y)` returns +0 for  $y > 0$  and not an odd integer.
- ▶ `pow(-1, ±∞)` returns 1.
- ▶ `pow(+1, y)` returns 1 for any  $y$ , even a NaN.
- ▶ `pow(x, ±0)` returns 1 for any  $x$ , even a NaN.
- ▶ `pow(x, y)` returns a NaN for finite  $x < 0$  and finite non-integer  $y$ .
- ▶ `pow(x, -∞)` returns  $+\infty$  for  $|x| < 1$ .
- ▶ `pow(x, -∞)` returns +0 for  $|x| > 1$ .
- ▶ `pow(x, +∞)` returns +0 for  $|x| < 1$ .
- ▶ `pow(x, +∞)` returns  $+\infty$  for  $|x| > 1$ .
- ▶ `pow(-∞, y)` returns -0 for  $y$  an odd integer less than 0.
- ▶ `pow(-∞, y)` returns +0 for  $y < 0$  and not an odd integer.
- ▶ `pow(-∞, y)` returns  $-\infty$  for  $y$  an odd integer greater than 0.
- ▶ `pow(-∞, y)` returns  $+\infty$  for  $y > 0$  and not an odd integer.
- ▶ `pow(+∞, y)` returns +0 for  $y < 0$ .
- ▶ `pow(+∞, y)` returns  $+\infty$  for  $y > 0$ .

## Description

Calculate the value of  $x$  to the power of  $y$

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double rcbrt (double x)`

Calculate reciprocal cube root function.

### Returns

- ▶ `rcbrt(  $\pm 0$  )` returns  $\pm \infty$ .
- ▶ `rcbrt(  $\pm \infty$  )` returns  $\pm 0$ .

### Description

Calculate reciprocal cube root function of  $x$

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double remainder (double x, double y)`

Compute double-precision floating-point remainder.

### Returns

- ▶ `remainder(x, 0)` returns NaN.
- ▶ `remainder(  $\pm \infty$ ,  $y$  )` returns NaN.
- ▶ `remainder(x,  $\pm \infty$  )` returns  $x$  for finite  $x$ .

### Description

Compute double-precision floating-point remainder  $r$  of dividing  $x$  by  $y$  for nonzero  $y$ . Thus  $r = x - ny$ . The value  $n$  is the integer value nearest  $\frac{x}{y}$ . In the case when  $|n - \frac{x}{y}| = \frac{1}{2}$ , the even  $n$  value is chosen.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double remquo (double x, double y, int *quo)`

Compute double-precision floating-point remainder and part of quotient.

### Returns

Returns the remainder.

- ▶ `remquo(x, 0, quo)` returns NaN.
- ▶ `remquo( $\pm \infty$ , y, quo)` returns NaN.
- ▶ `remquo(x,  $\pm \infty$ , quo)` returns x.

### Description

Compute a double-precision floating-point remainder in the same way as the `remainder()` function. Argument `quo` returns part of quotient upon division of  $x$  by  $y$ . Value `quo` has the same sign as  $\frac{x}{y}$  and may not be the exact quotient but agrees with the exact quotient in the low order 3 bits.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## \_\_device\_\_ double rint (double x)

Round to nearest integer value in floating-point.

### Returns

Returns rounded integer value.

### Description

Round  $x$  to the nearest integer value in floating-point format, with halfway cases rounded to the nearest even integer value.

## \_\_device\_\_ double round (double x)

Round to nearest integer value in floating-point.

### Returns

Returns rounded integer value.

### Description

Round  $x$  to the nearest integer value in floating-point format, with halfway cases rounded away from zero.

This function may be slower than alternate rounding methods. See `rint()`.

## \_\_device\_\_ double rsqrt (double x)

Calculate the reciprocal of the square root of the input argument.

### Returns

Returns  $1/\sqrt{x}$ .

- ▶ `rsqrt( +  $\infty$  )` returns  $+0$ .
- ▶ `rsqrt(  $\pm 0$  )` returns  $\pm \infty$ .
- ▶ `rsqrt(x)` returns NaN if  $x$  is less than 0.

### Description

Calculate the reciprocal of the nonnegative square root of  $x$ ,  $1/\sqrt{x}$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## \_\_device\_\_ double scalbln (double x, long int n)

Scale floating-point input by integer power of two.

### Returns

Returns  $x * 2^n$ .

- ▶ `scalbln(  $\pm 0$  , n )` returns  $\pm 0$ .
- ▶ `scalbln(x, 0)` returns  $x$ .
- ▶ `scalbln(  $\pm \infty$  , n )` returns  $\pm \infty$ .

### Description

Scale  $x$  by  $2^n$  by efficient manipulation of the floating-point exponent.

## \_\_device\_\_ double scalbn (double x, int n)

Scale floating-point input by integer power of two.

### Returns

Returns  $x * 2^n$ .

- ▶ `scalbn(  $\pm 0$  , n )` returns  $\pm 0$ .
- ▶ `scalbn(x, 0)` returns  $x$ .
- ▶ `scalbn(  $\pm \infty$  , n )` returns  $\pm \infty$ .

**Description**

Scale  $x$  by  $2^n$  by efficient manipulation of the floating-point exponent.

**\_\_device\_\_ int signbit (double a)**

Return the sign bit of the input.

**Returns**

Returns a nonzero value if and only if  $a$  is negative. Reports the sign bit of all values including infinities, zeros, and NaNs.

**Description**

Determine whether the floating-point value  $a$  is negative.

**\_\_device\_\_ double sin (double x)**

Calculate the sine of the input argument.

**Returns**

- ▶  $\sin(\pm 0)$  returns  $\pm 0$ .
- ▶  $\sin(\pm \infty)$  returns NaN.

**Description**

Calculate the sine of the input argument  $x$  (measured in radians).

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ void sincos (double x, double \*sptr, double \*cptr)**

Calculate the sine and cosine of the first input argument.

**Returns**

- ▶ none

**Description**

Calculate the sine and cosine of the first input argument  $x$  (measured in radians). The results for sine and cosine are written into the second argument, `sptr`, and, respectively, third argument, `cptr`.

See also:

`sin()` and `cos()`.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ void sincospi (double x, double *sptr, double *cptr)`

Calculate the sine and cosine of the first input argument  $\times \pi$ .

### Returns

- ▶ none

### Description

Calculate the sine and cosine of the first input argument,  $x$  (measured in radians),  $\times \pi$ . The results for sine and cosine are written into the second argument, `sptr`, and, respectively, third argument, `cptr`.

See also:

`sinpi()` and `cospi()`.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double sinh (double x)`

Calculate the hyperbolic sine of the input argument.

### Returns

- ▶ `sinh(  $\pm 0$  )` returns  $\pm 0$ .

### Description

Calculate the hyperbolic sine of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double sinpi (double x)`

Calculate the sine of the input argument  $\times \pi$ .

### Returns

- ▶ `sinpi(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `sinpi(  $\pm \infty$  )` returns NaN.

### Description

Calculate the sine of  $x \times \pi$  (measured in radians), where  $x$  is the input argument.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double sqrt (double x)`

Calculate the square root of the input argument.

### Returns

Returns  $\sqrt{x}$ .

- ▶ `sqrt(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `sqrt(  $+\infty$  )` returns  $+\infty$ .
- ▶ `sqrt(x)` returns NaN if  $x$  is less than 0.

### Description

Calculate the nonnegative square root of  $x$ ,  $\sqrt{x}$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double tan (double x)`

Calculate the tangent of the input argument.

### Returns

- ▶ `tan(  $\pm 0$  )` returns  $\pm 0$ .
- ▶ `tan(  $\pm \infty$  )` returns NaN.

**Description**

Calculate the tangent of the input argument  $x$  (measured in radians).

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double tanh (double x)**

Calculate the hyperbolic tangent of the input argument.

**Returns**

- ▶  $\tanh(\pm 0)$  returns  $\pm 0$ .

**Description**

Calculate the hyperbolic tangent of the input argument  $x$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double tgamma (double x)**

Calculate the gamma function of the input argument.

**Returns**

- ▶  $tgamma(\pm 0)$  returns  $\pm \infty$ .
- ▶  $tgamma(2)$  returns  $+0$ .
- ▶  $tgamma(x)$  returns  $\pm \infty$  if the correctly calculated value is outside the double floating point range.
- ▶  $tgamma(x)$  returns NaN if  $x < 0$ .
- ▶  $tgamma(-\infty)$  returns NaN.
- ▶  $tgamma(+\infty)$  returns  $+\infty$ .

**Description**

Calculate the gamma function of the input argument  $x$ , namely the value of  $\int_0^\infty e^{-t} t^{x-1} dt$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double trunc (double x)`

Truncate input argument to the integral part.

### Returns

Returns truncated integer value.

### Description

Round  $x$  to the nearest integer value that does not exceed  $x$  in magnitude.

## `__device__ double y0 (double x)`

Calculate the value of the Bessel function of the second kind of order 0 for the input argument.

### Returns

Returns the value of the Bessel function of the second kind of order 0.

- ▶  $y_0(0)$  returns  $-\infty$ .
- ▶  $y_0(x)$  returns NaN for  $x < 0$ .
- ▶  $y_0(+\infty)$  returns +0.
- ▶  $y_0(\text{NaN})$  returns NaN.

### Description

Calculate the value of the Bessel function of the second kind of order 0 for the input argument  $x$ ,  $Y_0(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double y1 (double x)`

Calculate the value of the Bessel function of the second kind of order 1 for the input argument.

### Returns

Returns the value of the Bessel function of the second kind of order 1.

- ▶  $y_1(0)$  returns  $-\infty$ .
- ▶  $y_1(x)$  returns NaN for  $x < 0$ .
- ▶  $y_1(+\infty)$  returns +0.
- ▶  $y_1(\text{NaN})$  returns NaN.

**Description**

Calculate the value of the Bessel function of the second kind of order 1 for the input argument  $x$ ,  $Y_1(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

**\_\_device\_\_ double yn (int n, double x)**

Calculate the value of the Bessel function of the second kind of order  $n$  for the input argument.

**Returns**

Returns the value of the Bessel function of the second kind of order  $n$ .

- ▶  $yn(n, x)$  returns NaN for  $n < 0$ .
- ▶  $yn(n, 0)$  returns  $-\infty$ .
- ▶  $yn(n, x)$  returns NaN for  $x < 0$ .
- ▶  $yn(n, +\infty)$  returns +0.
- ▶  $yn(n, NaN)$  returns NaN.

**Description**

Calculate the value of the Bessel function of the second kind of order  $n$  for the input argument  $x$ ,  $Y_n(x)$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## 1.4. Single Precision Intrinsics

This section describes single precision intrinsic functions that are only supported in device code.

**\_\_device\_\_ \_\_cudart\_builtin\_\_ float \_\_cosf (float x)**

Calculate the fast approximate cosine of the input argument.

**Returns**

Returns the approximate cosine of  $x$ .

**Description**

Calculate the fast approximate cosine of the input argument  $x$ , measured in radians.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- ▶ Input and output in the denormal range is flushed to sign preserving 0.0.

## `__device__ __cudart_builtin__ float __exp10f (float x)`

Calculate the fast approximate base 10 exponential of the input argument.

**Returns**

Returns an approximation to  $10^x$ .

**Description**

Calculate the fast approximate base 10 exponential of the input argument  $x$ ,  $10^x$ .

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- ▶ Most input and output values around denormal range are flushed to sign preserving 0.0.

## `__device__ __cudart_builtin__ float __expf (float x)`

Calculate the fast approximate base  $e$  exponential of the input argument.

**Returns**

Returns an approximation to  $e^x$ .

**Description**

Calculate the fast approximate base  $e$  exponential of the input argument  $x$ ,  $e^x$ .

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- ▶ Most input and output values around denormal range are flushed to sign preserving 0.0.

**\_\_device\_\_ float \_\_fadd\_rd (float x, float y)**

Add two floating point values in round-down mode.

**Returns**

Returns  $x + y$ .

**Description**

Compute the sum of  $x$  and  $y$  in round-down (to negative infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This operation will never be merged into a single multiply-add instruction.

**\_\_device\_\_ float \_\_fadd\_rn (float x, float y)**

Add two floating point values in round-to-nearest-even mode.

**Returns**

Returns  $x + y$ .

**Description**

Compute the sum of  $x$  and  $y$  in round-to-nearest-even rounding mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This operation will never be merged into a single multiply-add instruction.

**\_\_device\_\_ float \_\_fadd\_ru (float x, float y)**

Add two floating point values in round-up mode.

**Returns**

Returns  $x + y$ .

**Description**

Compute the sum of  $x$  and  $y$  in round-up (to positive infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ float __fadd_rz (float x, float y)`

Add two floating point values in round-towards-zero mode.

### Returns

Returns  $x + y$ .

### Description

Compute the sum of  $x$  and  $y$  in round-towards-zero mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ float __fdiv_rd (float x, float y)`

Divide two floating point values in round-down mode.

### Returns

Returns  $x / y$ .

### Description

Divide two floating point values  $x$  by  $y$  in round-down (to negative infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float __fdiv_rn (float x, float y)`

Divide two floating point values in round-to-nearest-even mode.

### Returns

Returns  $x / y$ .

**Description**

Divide two floating point values  $x$  by  $y$  in round-to-nearest-even mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## **`__device__ float __fdiv_ru (float x, float y)`**

Divide two floating point values in round-up mode.

**Returns**

Returns  $x / y$ .

**Description**

Divide two floating point values  $x$  by  $y$  in round-up (to positive infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## **`__device__ float __fdiv_rz (float x, float y)`**

Divide two floating point values in round-towards-zero mode.

**Returns**

Returns  $x / y$ .

**Description**

Divide two floating point values  $x$  by  $y$  in round-towards-zero mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## **`__device__ float __fdividef (float x, float y)`**

Calculate the fast approximate division of the input arguments.

**Returns**

Returns  $x / y$ .

- ▶ `__fdividef(  $\infty$ , y )` returns NaN for  $2^{126} < y < 2^{128}$ .
- ▶ `__fdividef(x, y)` returns 0 for  $2^{126} < y < 2^{128}$  and  $x \neq \infty$ .

### Description

Calculate the fast approximate division of  $x$  by  $y$ .

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.

## `__device__ float __fmaf_rd (float x, float y, float z)`

Compute  $x \times y + z$  as a single operation, in round-down mode.

### Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fmaf(x, y,  $-\infty$ )` returns NaN if  $x \times y$  is an exact  $+\infty$ .
- ▶ `fmaf(x, y,  $+\infty$ )` returns NaN if  $x \times y$  is an exact  $-\infty$ .

### Description

Computes the value of  $x \times y + z$  as a single ternary operation, rounding the result once in round-down (to negative infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float __fmaf_rn (float x, float y, float z)`

Compute  $x \times y + z$  as a single operation, in round-to-nearest-even mode.

### Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fmaf(x, y,  $-\infty$ )` returns NaN if  $x \times y$  is an exact  $+\infty$ .
- ▶ `fmaf(x, y,  $+\infty$ )` returns NaN if  $x \times y$  is an exact  $-\infty$ .

## Description

Computes the value of  $x \times y + z$  as a single ternary operation, rounding the result once in round-to-nearest-even mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float __fmaf_ru (float x, float y, float z)`

Compute  $x \times y + z$  as a single operation, in round-up mode.

## Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fmaf(x, y,  $-\infty$ )` returns NaN if  $x \times y$  is an exact  $+\infty$ .
- ▶ `fmaf(x, y,  $+\infty$ )` returns NaN if  $x \times y$  is an exact  $-\infty$ .

## Description

Computes the value of  $x \times y + z$  as a single ternary operation, rounding the result once in round-up (to positive infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float __fmaf_rz (float x, float y, float z)`

Compute  $x \times y + z$  as a single operation, in round-towards-zero mode.

## Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fmaf(x, y,  $-\infty$ )` returns NaN if  $x \times y$  is an exact  $+\infty$ .
- ▶ `fmaf(x, y,  $+\infty$ )` returns NaN if  $x \times y$  is an exact  $-\infty$ .

**Description**

Computes the value of  $x \times y + z$  as a single ternary operation, rounding the result once in round-towards-zero mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## **\_\_device\_\_ float \_\_fmul\_rd (float x, float y)**

Multiply two floating point values in round-down mode.

**Returns**

Returns  $x * y$ .

**Description**

Compute the product of  $x$  and  $y$  in round-down (to negative infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This operation will never be merged into a single multiply-add instruction.

## **\_\_device\_\_ float \_\_fmul\_rn (float x, float y)**

Multiply two floating point values in round-to-nearest-even mode.

**Returns**

Returns  $x * y$ .

**Description**

Compute the product of  $x$  and  $y$  in round-to-nearest-even mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ float __fmul_ru (float x, float y)`

Multiply two floating point values in round-up mode.

### Returns

Returns  $x * y$ .

### Description

Compute the product of  $x$  and  $y$  in round-up (to positive infinity) mode.

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- This operation will never be merged into a single multiply-add instruction.

## `__device__ float __fmul_rz (float x, float y)`

Multiply two floating point values in round-towards-zero mode.

### Returns

Returns  $x * y$ .

### Description

Compute the product of  $x$  and  $y$  in round-towards-zero mode.

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- This operation will never be merged into a single multiply-add instruction.

## `__device__ float __frcp_rd (float x)`

Compute  $\frac{1}{x}$  in round-down mode.

### Returns

Returns  $\frac{1}{x}$ .

### Description

Compute the reciprocal of  $x$  in round-down (to negative infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float __frcp_rn (float x)`

Compute  $\frac{1}{x}$  in round-to-nearest-even mode.

### Returns

Returns  $\frac{1}{x}$ .

### Description

Compute the reciprocal of  $x$  in round-to-nearest-even mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float __frcp_ru (float x)`

Compute  $\frac{1}{x}$  in round-up mode.

### Returns

Returns  $\frac{1}{x}$ .

### Description

Compute the reciprocal of  $x$  in round-up (to positive infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float __frcp_rz (float x)`

Compute  $\frac{1}{x}$  in round-towards-zero mode.

### Returns

Returns  $\frac{1}{x}$ .

**Description**

Compute the reciprocal of  $x$  in round-towards-zero mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## **\_\_device\_\_ float \_\_frsqrtn (float x)**

Compute  $1/\sqrt{x}$  in round-to-nearest-even mode.

**Returns**

Returns  $1/\sqrt{x}$ .

**Description**

Compute the reciprocal square root of  $x$  in round-to-nearest-even mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## **\_\_device\_\_ float \_\_fsqrt\_rd (float x)**

Compute  $\sqrt{x}$  in round-down mode.

**Returns**

Returns  $\sqrt{x}$ .

**Description**

Compute the square root of  $x$  in round-down (to negative infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float \_\_fsqrt\_rn (float x)**

Compute  $\sqrt{x}$  in round-to-nearest-even mode.

**Returns**

Returns  $\sqrt{x}$ .

**Description**

Compute the square root of  $x$  in round-to-nearest-even mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float \_\_fsqrt\_ru (float x)**

Compute  $\sqrt{x}$  in round-up mode.

**Returns**

Returns  $\sqrt{x}$ .

**Description**

Compute the square root of  $x$  in round-up (to positive infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

**\_\_device\_\_ float \_\_fsqrt\_rz (float x)**

Compute  $\sqrt{x}$  in round-towards-zero mode.

**Returns**

Returns  $\sqrt{x}$ .

**Description**

Compute the square root of  $x$  in round-towards-zero mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.

## `__device__ float __fsub_rd (float x, float y)`

Subtract two floating point values in round-down mode.

### Returns

Returns  $x - y$ .

### Description

Compute the difference of  $x$  and  $y$  in round-down (to negative infinity) mode.

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- This operation will never be merged into a single multiply-add instruction.

## `__device__ float __fsub_rn (float x, float y)`

Subtract two floating point values in round-to-nearest-even mode.

### Returns

Returns  $x - y$ .

### Description

Compute the difference of  $x$  and  $y$  in round-to-nearest-even rounding mode.

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- This operation will never be merged into a single multiply-add instruction.

## `__device__ float __fsub_ru (float x, float y)`

Subtract two floating point values in round-up mode.

### Returns

Returns  $x - y$ .

**Description**

Compute the difference of  $x$  and  $y$  in round-up (to positive infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This operation will never be merged into a single multiply-add instruction.

## **\_\_device\_\_ float \_\_fsub\_rz (float x, float y)**

Subtract two floating point values in round-towards-zero mode.

**Returns**

Returns  $x - y$ .

**Description**

Compute the difference of  $x$  and  $y$  in round-towards-zero mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-1.
- ▶ This operation will never be merged into a single multiply-add instruction.

## **\_\_device\_\_ \_\_cudart\_builtin\_\_ float \_\_log10f (float x)**

Calculate the fast approximate base 10 logarithm of the input argument.

**Returns**

Returns an approximation to  $\log_{10}(x)$ .

**Description**

Calculate the fast approximate base 10 logarithm of the input argument  $x$ .

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- ▶ Most input and output values around denormal range are flushed to sign preserving 0.0.

**\_\_device\_\_ \_\_cudart\_builtin\_\_ float \_\_log2f (float x)**

Calculate the fast approximate base 2 logarithm of the input argument.

**Returns**

Returns an approximation to  $\log_2(x)$ .

**Description**

Calculate the fast approximate base 2 logarithm of the input argument  $x$ .

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- Input and output in the denormal range is flushed to sign preserving 0.0.

**\_\_device\_\_ \_\_cudart\_builtin\_\_ float \_\_logf (float x)**

Calculate the fast approximate base  $e$  logarithm of the input argument.

**Returns**

Returns an approximation to  $\log_e(x)$ .

**Description**

Calculate the fast approximate base  $e$  logarithm of the input argument  $x$ .

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- Most input and output values around denormal range are flushed to sign preserving 0.0.

**\_\_device\_\_ \_\_cudart\_builtin\_\_ float \_\_powf (float x, float y)**

Calculate the fast approximate of  $x^y$ .

**Returns**

Returns an approximation to  $x^y$ .

## Description

Calculate the fast approximate of  $x$ , the first input argument, raised to the power of  $y$ , the second input argument,  $x^y$ .

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- ▶ Most input and output values around denormal range are flushed to sign preserving 0.0.

## `__device__ float __saturatef (float x)`

Clamp the input argument to  $[+0.0, 1.0]$ .

## Returns

- ▶ `__saturatef(x)` returns 0 if  $x < 0$ .
- ▶ `__saturatef(x)` returns 1 if  $x > 1$ .
- ▶ `__saturatef(x)` returns  $x$  if  $0 \leq x \leq 1$ .
- ▶ `__saturatef(NaN)` returns 0.

## Description

Clamp the input argument  $x$  to be within the interval  $[+0.0, 1.0]$ .

## `__device__ __cudart_builtin__ void __sincosf (float x, float *sptr, float *cptr)`

Calculate the fast approximate of sine and cosine of the first input argument.

## Returns

- ▶ none

## Description

Calculate the fast approximate of sine and cosine of the first input argument  $x$  (measured in radians). The results for sine and cosine are written into the second argument, `sptr`, and, respectively, third argument, `cptr`.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- ▶ Denorm input/output is flushed to sign preserving 0.0.

## `__device__ __cudart_builtin__ float __sinf (float x)`

Calculate the fast approximate sine of the input argument.

### Returns

Returns the approximate sine of  $x$ .

### Description

Calculate the fast approximate sine of the input argument  $x$ , measured in radians.

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- Input and output in the denormal range is flushed to sign preserving 0.0.

## `__device__ __cudart_builtin__ float __tanf (float x)`

Calculate the fast approximate tangent of the input argument.

### Returns

Returns the approximate tangent of  $x$ .

### Description

Calculate the fast approximate tangent of the input argument  $x$ , measured in radians.

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-4.
- The result is computed as the fast divide of `__sinf()` by `__cosf()`. Denormal input and output are flushed to sign-preserving 0.0 at each step of the computation.

## 1.5. Double Precision Intrinsics

This section describes double precision intrinsic functions that are only supported in device code.

**\_\_device\_\_ double \_\_dadd\_rd (double x, double y)**

Add two floating point values in round-down mode.

**Returns**

Returns  $x + y$ .

**Description**

Adds two floating point values  $x$  and  $y$  in round-down (to negative infinity) mode.

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- This operation will never be merged into a single multiply-add instruction.

**\_\_device\_\_ double \_\_dadd\_rn (double x, double y)**

Add two floating point values in round-to-nearest-even mode.

**Returns**

Returns  $x + y$ .

**Description**

Adds two floating point values  $x$  and  $y$  in round-to-nearest-even mode.

- For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- This operation will never be merged into a single multiply-add instruction.

**\_\_device\_\_ double \_\_dadd\_ru (double x, double y)**

Add two floating point values in round-up mode.

**Returns**

Returns  $x + y$ .

**Description**

Adds two floating point values  $x$  and  $y$  in round-up (to positive infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ double __dadd_rz (double x, double y)`

Add two floating point values in round-towards-zero mode.

### Returns

Returns  $x + y$ .

### Description

Adds two floating point values  $x$  and  $y$  in round-towards-zero mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ double __ddiv_rd (double x, double y)`

Divide two floating point values in round-down mode.

### Returns

Returns  $x / y$ .

### Description

Divides two floating point values  $x$  by  $y$  in round-down (to negative infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

## `__device__ double __ddiv_rn (double x, double y)`

Divide two floating point values in round-to-nearest-even mode.

### Returns

Returns  $x / y$ .

**Description**

Divides two floating point values  $x$  by  $y$  in round-to-nearest-even mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

**\_\_device\_\_ double \_\_ddiv\_ru (double x, double y)**

Divide two floating point values in round-up mode.

**Returns**

Returns  $x / y$ .

**Description**

Divides two floating point values  $x$  by  $y$  in round-up (to positive infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

**\_\_device\_\_ double \_\_ddiv\_rz (double x, double y)**

Divide two floating point values in round-towards-zero mode.

**Returns**

Returns  $x / y$ .

**Description**

Divides two floating point values  $x$  by  $y$  in round-towards-zero mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

## `__device__ double __dmul_rd (double x, double y)`

Multiply two floating point values in round-down mode.

### Returns

Returns  $x * y$ .

### Description

Multiplies two floating point values  $x$  and  $y$  in round-down (to negative infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ double __dmul_rn (double x, double y)`

Multiply two floating point values in round-to-nearest-even mode.

### Returns

Returns  $x * y$ .

### Description

Multiplies two floating point values  $x$  and  $y$  in round-to-nearest-even mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ double __dmul_ru (double x, double y)`

Multiply two floating point values in round-up mode.

### Returns

Returns  $x * y$ .

### Description

Multiplies two floating point values  $x$  and  $y$  in round-up (to positive infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ double __dmul_rz (double x, double y)`

Multiply two floating point values in round-towards-zero mode.

### Returns

Returns  $x * y$ .

### Description

Multiplies two floating point values  $x$  and  $y$  in round-towards-zero mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ double __drcp_rd (double x)`

Compute  $\frac{1}{x}$  in round-down mode.

### Returns

Returns  $\frac{1}{x}$ .

### Description

Compute the reciprocal of  $x$  in round-down (to negative infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

## `__device__ double __drcp_rn (double x)`

Compute  $\frac{1}{x}$  in round-to-nearest-even mode.

### Returns

Returns  $\frac{1}{x}$ .

**Description**

Compute the reciprocal of  $x$  in round-to-nearest-even mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

**\_\_device\_\_ double \_\_drcp\_ru (double x)**

Compute  $\frac{1}{x}$  in round-up mode.

**Returns**

Returns  $\frac{1}{x}$ .

**Description**

Compute the reciprocal of  $x$  in round-up (to positive infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

**\_\_device\_\_ double \_\_drcp\_rz (double x)**

Compute  $\frac{1}{x}$  in round-towards-zero mode.

**Returns**

Returns  $\frac{1}{x}$ .

**Description**

Compute the reciprocal of  $x$  in round-towards-zero mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

## `__device__ double __dsqrt_rd (double x)`

Compute  $\sqrt{x}$  in round-down mode.

### Returns

Returns  $\sqrt{x}$ .

### Description

Compute the square root of  $x$  in round-down (to negative infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

## `__device__ double __dsqrt_rn (double x)`

Compute  $\sqrt{x}$  in round-to-nearest-even mode.

### Returns

Returns  $\sqrt{x}$ .

### Description

Compute the square root of  $x$  in round-to-nearest-even mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

## `__device__ double __dsqrt_ru (double x)`

Compute  $\sqrt{x}$  in round-up mode.

### Returns

Returns  $\sqrt{x}$ .

### Description

Compute the square root of  $x$  in round-up (to positive infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

## `__device__ double __dsqrt_rz (double x)`

Compute  $\sqrt{x}$  in round-towards-zero mode.

### Returns

Returns  $\sqrt{x}$ .

### Description

Compute the square root of  $x$  in round-towards-zero mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ Requires compute capability  $\geq 2.0$ .

## `__device__ double __dsub_rd (double x, double y)`

Subtract two floating point values in round-down mode.

### Returns

Returns  $x - y$ .

### Description

Subtracts two floating point values  $x$  and  $y$  in round-down (to negative infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ double __dsub_rn (double x, double y)`

Subtract two floating point values in round-to-nearest-even mode.

### Returns

Returns  $x - y$ .

**Description**

Subtracts two floating point values  $x$  and  $y$  in round-to-nearest-even mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## **`__device__ double __dsub_ru (double x, double y)`**

Subtract two floating point values in round-up mode.

**Returns**

Returns  $x - y$ .

**Description**

Subtracts two floating point values  $x$  and  $y$  in round-up (to positive infinity) mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## **`__device__ double __dsub_rz (double x, double y)`**

Subtract two floating point values in round-towards-zero mode.

**Returns**

Returns  $x - y$ .

**Description**

Subtracts two floating point values  $x$  and  $y$  in round-towards-zero mode.

- ▶ For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.
- ▶ This operation will never be merged into a single multiply-add instruction.

## `__device__ double __fma_rd (double x, double y, double z)`

Compute  $x \times y + z$  as a single operation in round-down mode.

### Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fmaf(x, y,  $-\infty$ )` returns NaN if  $x \times y$  is an exact  $+\infty$
- ▶ `fmaf(x, y,  $+\infty$ )` returns NaN if  $x \times y$  is an exact  $-\infty$

### Description

Computes the value of  $x \times y + z$  as a single ternary operation, rounding the result once in round-down (to negative infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double __fma_rn (double x, double y, double z)`

Compute  $x \times y + z$  as a single operation in round-to-nearest-even mode.

### Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fmaf(x, y,  $-\infty$ )` returns NaN if  $x \times y$  is an exact  $+\infty$
- ▶ `fmaf(x, y,  $+\infty$ )` returns NaN if  $x \times y$  is an exact  $-\infty$

### Description

Computes the value of  $x \times y + z$  as a single ternary operation, rounding the result once in round-to-nearest-even mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double __fma_ru (double x, double y, double z)`

Compute  $x \times y + z$  as a single operation in round-up mode.

### Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fmaf(x, y,  $-\infty$ )` returns NaN if  $x \times y$  is an exact  $+\infty$
- ▶ `fmaf(x, y,  $+\infty$ )` returns NaN if  $x \times y$  is an exact  $-\infty$

### Description

Computes the value of  $x \times y + z$  as a single ternary operation, rounding the result once in round-up (to positive infinity) mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## `__device__ double __fma_rz (double x, double y, double z)`

Compute  $x \times y + z$  as a single operation in round-towards-zero mode.

### Returns

Returns the rounded value of  $x \times y + z$  as a single operation.

- ▶ `fmaf(  $\pm \infty$ ,  $\pm 0$ , z )` returns NaN.
- ▶ `fmaf(  $\pm 0$ ,  $\pm \infty$ , z )` returns NaN.
- ▶ `fmaf(x, y,  $-\infty$ )` returns NaN if  $x \times y$  is an exact  $+\infty$
- ▶ `fmaf(x, y,  $+\infty$ )` returns NaN if  $x \times y$  is an exact  $-\infty$

### Description

Computes the value of  $x \times y + z$  as a single ternary operation, rounding the result once in round-towards-zero mode.

For accuracy information for this function see the CUDA C Programming Guide, Appendix C, Table C-2.

## 1.6. Integer Intrinsics

This section describes integer intrinsic functions that are only supported in device code.

### `__device__ unsigned int __brev (unsigned int x)`

Reverse the bit order of a 32 bit unsigned integer.

#### Returns

Returns the bit-reversed value of  $x$ . i.e. bit  $N$  of the return value corresponds to bit  $31-N$  of  $x$ .

#### Description

Reverses the bit order of the 32 bit unsigned integer  $x$ .

### `__device__ unsigned long long int __brevll (unsigned long long int x)`

Reverse the bit order of a 64 bit unsigned integer.

#### Returns

Returns the bit-reversed value of  $x$ . i.e. bit  $N$  of the return value corresponds to bit  $63-N$  of  $x$ .

#### Description

Reverses the bit order of the 64 bit unsigned integer  $x$ .

### `__device__ unsigned int __byte_perm (unsigned int x, unsigned int y, unsigned int s)`

Return selected bytes from two 32 bit unsigned integers.

#### Returns

The returned value  $r$  is computed to be: `result[n] := input[selector[n]]`  
where `result[n]` is the  $n$ th byte of  $r$ .

#### Description

`byte_perm(x,y,s)` returns a 32-bit integer consisting of four bytes from eight input bytes provided in the two input integers  $x$  and  $y$ , as specified by a selector,  $s$ .

The input bytes are indexed as follows:  $\text{input}[0] = x\langle 7:0 \rangle$   $\text{input}[1] = x\langle 15:8 \rangle$   $\text{input}[2] = x\langle 23:16 \rangle$   $\text{input}[3] = x\langle 31:24 \rangle$   $\text{input}[4] = y\langle 7:0 \rangle$   $\text{input}[5] = y\langle 15:8 \rangle$   $\text{input}[6] = y\langle 23:16 \rangle$   $\text{input}[7] = y\langle 31:24 \rangle$  The selector indices are as follows (the upper 16-bits of the selector are not used):  $\text{selector}[0] = s\langle 2:0 \rangle$   $\text{selector}[1] = s\langle 6:4 \rangle$   $\text{selector}[2] = s\langle 10:8 \rangle$   $\text{selector}[3] = s\langle 14:12 \rangle$

## `__device__ int __clz (int x)`

Return the number of consecutive high-order zero bits in a 32 bit integer.

### Returns

Returns a value between 0 and 32 inclusive representing the number of zero bits.

### Description

Count the number of consecutive leading zero bits, starting at the most significant bit (bit 31) of  $x$ .

## `__device__ int __clzll (long long int x)`

Count the number of consecutive high-order zero bits in a 64 bit integer.

### Returns

Returns a value between 0 and 64 inclusive representing the number of zero bits.

### Description

Count the number of consecutive leading zero bits, starting at the most significant bit (bit 63) of  $x$ .

## `__device__ int __ffs (int x)`

Find the position of the least significant bit set to 1 in a 32 bit integer.

### Returns

Returns a value between 0 and 32 inclusive representing the position of the first bit set.

- `__ffs(0)` returns 0.

### Description

Find the position of the first (least significant) bit set to 1 in  $x$ , where the least significant bit position is 1.

## `__device__ int __ffsll (long long int x)`

Find the position of the least significant bit set to 1 in a 64 bit integer.

### Returns

Returns a value between 0 and 64 inclusive representing the position of the first bit set.

- `__ffsll(0)` returns 0.

### Description

Find the position of the first (least significant) bit set to 1 in  $x$ , where the least significant bit position is 1.

## `__device__ int __hadd (int, int)`

Compute average of signed input arguments, avoiding overflow in the intermediate sum.

### Returns

Returns a signed integer value representing the signed average value of the two inputs.

### Description

Compute average of signed input arguments  $x$  and  $y$  as  $(x + y) >> 1$ , avoiding overflow in the intermediate sum.

## `__device__ int __mul24 (int x, int y)`

Calculate the least significant 32 bits of the product of the least significant 24 bits of two integers.

### Returns

Returns the least significant 32 bits of the product  $x * y$ .

### Description

Calculate the least significant 32 bits of the product of the least significant 24 bits of  $x$  and  $y$ . The high order 8 bits of  $x$  and  $y$  are ignored.

## `__device__ long long int __mul64hi (long long int x, long long int y)`

Calculate the most significant 64 bits of the product of the two 64 bit integers.

### Returns

Returns the most significant 64 bits of the product  $x * y$ .

### Description

Calculate the most significant 64 bits of the 128-bit product  $x * y$ , where  $x$  and  $y$  are 64-bit integers.

## `__device__ int __mulhi (int x, int y)`

Calculate the most significant 32 bits of the product of the two 32 bit integers.

### Returns

Returns the most significant 32 bits of the product  $x * y$ .

### Description

Calculate the most significant 32 bits of the 64-bit product  $x * y$ , where  $x$  and  $y$  are 32-bit integers.

## `__device__ int __popc (unsigned int x)`

Count the number of bits that are set to 1 in a 32 bit integer.

### Returns

Returns a value between 0 and 32 inclusive representing the number of set bits.

### Description

Count the number of bits that are set to 1 in  $x$ .

## `__device__ int __popcll (unsigned long long int x)`

Count the number of bits that are set to 1 in a 64 bit integer.

### Returns

Returns a value between 0 and 64 inclusive representing the number of set bits.

**Description**

Count the number of bits that are set to 1 in  $x$ .

**\_\_device\_\_ int \_\_rhadd (int, int)**

Compute rounded average of signed input arguments, avoiding overflow in the intermediate sum.

**Returns**

Returns a signed integer value representing the signed rounded average value of the two inputs.

**Description**

Compute average of signed input arguments  $x$  and  $y$  as  $(x + y + 1) \gg 1$ , avoiding overflow in the intermediate sum.

**\_\_device\_\_ unsigned int \_\_sad (int x, int y, unsigned int z)**

Calculate  $|x - y| + z$ , the sum of absolute difference.

**Returns**

Returns  $|x - y| + z$ .

**Description**

Calculate  $|x - y| + z$ , the 32-bit sum of the third argument  $z$  plus and the absolute value of the difference between the first argument,  $x$ , and second argument,  $y$ .

Inputs  $x$  and  $y$  are signed 32-bit integers, input  $z$  is a 32-bit unsigned integer.

**\_\_device\_\_ unsigned int \_\_uhadd (unsigned int, unsigned int)**

Compute average of unsigned input arguments, avoiding overflow in the intermediate sum.

**Returns**

Returns an unsigned integer value representing the unsigned average value of the two inputs.

**Description**

Compute average of unsigned input arguments  $x$  and  $y$  as  $(x + y) >> 1$ , avoiding overflow in the intermediate sum.

## `__device__ unsigned int __umul24 (unsigned int x, unsigned int y)`

Calculate the least significant 32 bits of the product of the least significant 24 bits of two unsigned integers.

**Returns**

Returns the least significant 32 bits of the product  $x * y$ .

**Description**

Calculate the least significant 32 bits of the product of the least significant 24 bits of  $x$  and  $y$ . The high order 8 bits of  $x$  and  $y$  are ignored.

## `__device__ unsigned long long int __umul64hi (unsigned long long int x, unsigned long long int y)`

Calculate the most significant 64 bits of the product of the two 64 unsigned bit integers.

**Returns**

Returns the most significant 64 bits of the product  $x * y$ .

**Description**

Calculate the most significant 64 bits of the 128-bit product  $x * y$ , where  $x$  and  $y$  are 64-bit unsigned integers.

## `__device__ unsigned int __umulhi (unsigned int x, unsigned int y)`

Calculate the most significant 32 bits of the product of the two 32 bit unsigned integers.

**Returns**

Returns the most significant 32 bits of the product  $x * y$ .

**Description**

Calculate the most significant 32 bits of the 64-bit product  $x * y$ , where  $x$  and  $y$  are 32-bit unsigned integers.

## `__device__ unsigned int __urhadd (unsigned int, unsigned int)`

Compute rounded average of unsigned input arguments, avoiding overflow in the intermediate sum.

### Returns

Returns an unsigned integer value representing the unsigned rounded average value of the two inputs.

### Description

Compute average of unsigned input arguments  $x$  and  $y$  as  $(x + y + 1) \gg 1$ , avoiding overflow in the intermediate sum.

## `__device__ unsigned int __usad (unsigned int x, unsigned int y, unsigned int z)`

Calculate  $|x - y| + z$ , the sum of absolute difference.

### Returns

Returns  $|x - y| + z$ .

### Description

Calculate  $|x - y| + z$ , the 32-bit sum of the third argument  $z$  plus and the absolute value of the difference between the first argument,  $x$ , and second argument,  $y$ .

Inputs  $x$ ,  $y$ , and  $z$  are unsigned 32-bit integers.

## 1.7. Type Casting Ininsics

This section describes type casting intrinsic functions that are only supported in device code.

## `__device__ float __double2float_rd (double x)`

Convert a double to a float in round-down mode.

### Returns

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a single-precision floating point value in round-down (to negative infinity) mode.

**\_\_device\_\_ float \_\_double2float\_rn (double x)**

Convert a double to a float in round-to-nearest-even mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a single-precision floating point value in round-to-nearest-even mode.

**\_\_device\_\_ float \_\_double2float\_ru (double x)**

Convert a double to a float in round-up mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a single-precision floating point value in round-up (to positive infinity) mode.

**\_\_device\_\_ float \_\_double2float\_rz (double x)**

Convert a double to a float in round-towards-zero mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a single-precision floating point value in round-towards-zero mode.

## `__device__ int __double2hiint (double x)`

Reinterpret high 32 bits in a double as a signed integer.

### Returns

Returns reinterpreted value.

### Description

Reinterpret the high 32 bits in the double-precision floating point value  $x$  as a signed integer.

## `__device__ int __double2int_rd (double x)`

Convert a double to a signed int in round-down mode.

### Returns

Returns converted value.

### Description

Convert the double-precision floating point value  $x$  to a signed integer value in round-down (to negative infinity) mode.

## `__device__ int __double2int_rn (double x)`

Convert a double to a signed int in round-to-nearest-even mode.

### Returns

Returns converted value.

### Description

Convert the double-precision floating point value  $x$  to a signed integer value in round-to-nearest-even mode.

## `__device__ int __double2int_ru (double x)`

Convert a double to a signed int in round-up mode.

### Returns

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a signed integer value in round-up (to positive infinity) mode.

**`__device__ int __double2int_rz (double)`**

Convert a double to a signed int in round-towards-zero mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a signed integer value in round-towards-zero mode.

**`__device__ long long int __double2ll_rd (double x)`**

Convert a double to a signed 64-bit int in round-down mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a signed 64-bit integer value in round-down (to negative infinity) mode.

**`__device__ long long int __double2ll_rn (double x)`**

Convert a double to a signed 64-bit int in round-to-nearest-even mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a signed 64-bit integer value in round-to-nearest-even mode.

**\_\_device\_\_ long long int \_\_double2ll\_ru (double x)**

Convert a double to a signed 64-bit int in round-up mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a signed 64-bit integer value in round-up (to positive infinity) mode.

**\_\_device\_\_ long long int \_\_double2ll\_rz (double)**

Convert a double to a signed 64-bit int in round-towards-zero mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to a signed 64-bit integer value in round-towards-zero mode.

**\_\_device\_\_ int \_\_double2loint (double x)**

Reinterpret low 32 bits in a double as a signed integer.

**Returns**

Returns reinterpreted value.

**Description**

Reinterpret the low 32 bits in the double-precision floating point value  $x$  as a signed integer.

**\_\_device\_\_ unsigned int \_\_double2uint\_rd (double x)**

Convert a double to an unsigned int in round-down mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to an unsigned integer value in round-down (to negative infinity) mode.

**\_\_device\_\_ unsigned int \_\_double2uint\_rn (double x)**

Convert a double to an unsigned int in round-to-nearest-even mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to an unsigned integer value in round-to-nearest-even mode.

**\_\_device\_\_ unsigned int \_\_double2uint\_ru (double x)**

Convert a double to an unsigned int in round-up mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to an unsigned integer value in round-up (to positive infinity) mode.

**\_\_device\_\_ unsigned int \_\_double2uint\_rz (double)**

Convert a double to an unsigned int in round-towards-zero mode.

**Returns**

Returns converted value.

**Description**

Convert the double-precision floating point value  $x$  to an unsigned integer value in round-towards-zero mode.

## `__device__ unsigned long long int __double2ull_rd(double x)`

Convert a double to an unsigned 64-bit int in round-down mode.

### Returns

Returns converted value.

### Description

Convert the double-precision floating point value  $x$  to an unsigned 64-bit integer value in round-down (to negative infinity) mode.

## `__device__ unsigned long long int __double2ull_rn(double x)`

Convert a double to an unsigned 64-bit int in round-to-nearest-even mode.

### Returns

Returns converted value.

### Description

Convert the double-precision floating point value  $x$  to an unsigned 64-bit integer value in round-to-nearest-even mode.

## `__device__ unsigned long long int __double2ull_ru(double x)`

Convert a double to an unsigned 64-bit int in round-up mode.

### Returns

Returns converted value.

### Description

Convert the double-precision floating point value  $x$  to an unsigned 64-bit integer value in round-up (to positive infinity) mode.

## `__device__ unsigned long long int __double2ull_rz (double)`

Convert a double to an unsigned 64-bit int in round-towards-zero mode.

### Returns

Returns converted value.

### Description

Convert the double-precision floating point value  $x$  to an unsigned 64-bit integer value in round-towards-zero mode.

## `__device__ long long int __double_as_longlong (double x)`

Reinterpret bits in a double as a 64-bit signed integer.

### Returns

Returns reinterpreted value.

### Description

Reinterpret the bits in the double-precision floating point value  $x$  as a signed 64-bit integer.

## `__device__ unsigned short __float2half_rn (float x)`

Convert a single-precision float to a half-precision float in round-to-nearest-even mode.

### Returns

Returns converted value.

### Description

Convert the single-precision float value  $x$  to a half-precision floating point value represented in `unsigned short` format, in round-to-nearest-even mode.

## `__device__ int __float2int_rd (float x)`

Convert a float to a signed integer in round-down mode.

### Returns

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to a signed integer in round-down (to negative infinity) mode.

**`__device__ int __float2int_rn (float x)`**

Convert a float to a signed integer in round-to-nearest-even mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to a signed integer in round-to-nearest-even mode.

**`__device__ int __float2int_ru (float)`**

Convert a float to a signed integer in round-up mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to a signed integer in round-up (to positive infinity) mode.

**`__device__ int __float2int_rz (float x)`**

Convert a float to a signed integer in round-towards-zero mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to a signed integer in round-towards-zero mode.

**\_\_device\_\_ long long int \_\_float2ll\_rd (float x)**

Convert a float to a signed 64-bit integer in round-down mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to a signed 64-bit integer in round-down (to negative infinity) mode.

**\_\_device\_\_ long long int \_\_float2ll\_rn (float x)**

Convert a float to a signed 64-bit integer in round-to-nearest-even mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to a signed 64-bit integer in round-to-nearest-even mode.

**\_\_device\_\_ long long int \_\_float2ll\_ru (float x)**

Convert a float to a signed 64-bit integer in round-up mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to a signed 64-bit integer in round-up (to positive infinity) mode.

**\_\_device\_\_ long long int \_\_float2ll\_rz (float x)**

Convert a float to a signed 64-bit integer in round-towards-zero mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to a signed 64-bit integer in round-towards-zero mode.

**\_\_device\_\_ unsigned int \_\_float2uint\_rd (float x)**

Convert a float to an unsigned integer in round-down mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to an unsigned integer in round-down (to negative infinity) mode.

**\_\_device\_\_ unsigned int \_\_float2uint\_rn (float x)**

Convert a float to an unsigned integer in round-to-nearest-even mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to an unsigned integer in round-to-nearest-even mode.

**\_\_device\_\_ unsigned int \_\_float2uint\_ru (float x)**

Convert a float to an unsigned integer in round-up mode.

**Returns**

Returns converted value.

**Description**

Convert the single-precision floating point value  $x$  to an unsigned integer in round-up (to positive infinity) mode.

## `__device__ unsigned int __float2uint_rz (float x)`

Convert a float to an unsigned integer in round-towards-zero mode.

### Returns

Returns converted value.

### Description

Convert the single-precision floating point value  $x$  to an unsigned integer in round-towards-zero mode.

## `__device__ unsigned long long int __float2ull_rd (float x)`

Convert a float to an unsigned 64-bit integer in round-down mode.

### Returns

Returns converted value.

### Description

Convert the single-precision floating point value  $x$  to an unsigned 64-bit integer in round-down (to negative infinity) mode.

## `__device__ unsigned long long int __float2ull_rn (float x)`

Convert a float to an unsigned 64-bit integer in round-to-nearest-even mode.

### Returns

Returns converted value.

### Description

Convert the single-precision floating point value  $x$  to an unsigned 64-bit integer in round-to-nearest-even mode.

**\_\_device\_\_ unsigned long long int \_\_float2ull\_ru (float x)**

Convert a float to an unsigned 64-bit integer in round-up mode.

#### Returns

Returns converted value.

#### Description

Convert the single-precision floating point value  $x$  to an unsigned 64-bit integer in round-up (to positive infinity) mode.

**\_\_device\_\_ unsigned long long int \_\_float2ull\_rz (float x)**

Convert a float to an unsigned 64-bit integer in round-towards-zero mode.

#### Returns

Returns converted value.

#### Description

Convert the single-precision floating point value  $x$  to an unsigned 64-bit integer in round-towards\_zero mode.

**\_\_device\_\_ int \_\_float\_as\_int (float x)**

Reinterpret bits in a float as a signed integer.

#### Returns

Returns reinterpreted value.

#### Description

Reinterpret the bits in the single-precision floating point value  $x$  as a signed integer.

**\_\_device\_\_ float \_\_half2float (unsigned short x)**

Convert a half-precision float to a single-precision float in round-to-nearest-even mode.

#### Returns

Returns converted value.

**Description**

Convert the half-precision floating point value  $x$  represented in `unsigned short` format to a single-precision floating point value.

**`__device__ double __hiloint2double (int hi, int lo)`**

Reinterpret high and low 32-bit integer values as a double.

**Returns**

Returns reinterpreted value.

**Description**

Reinterpret the integer value of `hi` as the high 32 bits of a double-precision floating point value and the integer value of `lo` as the low 32 bits of the same double-precision floating point value.

**`__device__ double __int2double_rn (int x)`**

Convert a signed int to a double.

**Returns**

Returns converted value.

**Description**

Convert the signed integer value  $x$  to a double-precision floating point value.

**`__device__ float __int2float_rd (int x)`**

Convert a signed integer to a float in round-down mode.

**Returns**

Returns converted value.

**Description**

Convert the signed integer value  $x$  to a single-precision floating point value in round-down (to negative infinity) mode.

## `__device__ float __int2float_rn (int x)`

Convert a signed integer to a float in round-to-nearest-even mode.

### Returns

Returns converted value.

### Description

Convert the signed integer value  $x$  to a single-precision floating point value in round-to-nearest-even mode.

## `__device__ float __int2float_ru (int x)`

Convert a signed integer to a float in round-up mode.

### Returns

Returns converted value.

### Description

Convert the signed integer value  $x$  to a single-precision floating point value in round-up (to positive infinity) mode.

## `__device__ float __int2float_rz (int x)`

Convert a signed integer to a float in round-towards-zero mode.

### Returns

Returns converted value.

### Description

Convert the signed integer value  $x$  to a single-precision floating point value in round-towards-zero mode.

## `__device__ float __int_as_float (int x)`

Reinterpret bits in an integer as a float.

### Returns

Returns reinterpreted value.

**Description**

Reinterpret the bits in the signed integer value  $x$  as a single-precision floating point value.

**`__device__ double __ll2double_rd (long long int x)`**

Convert a signed 64-bit int to a double in round-down mode.

**Returns**

Returns converted value.

**Description**

Convert the signed 64-bit integer value  $x$  to a double-precision floating point value in round-down (to negative infinity) mode.

**`__device__ double __ll2double_rn (long long int x)`**

Convert a signed 64-bit int to a double in round-to-nearest-even mode.

**Returns**

Returns converted value.

**Description**

Convert the signed 64-bit integer value  $x$  to a double-precision floating point value in round-to-nearest-even mode.

**`__device__ double __ll2double_ru (long long int x)`**

Convert a signed 64-bit int to a double in round-up mode.

**Returns**

Returns converted value.

**Description**

Convert the signed 64-bit integer value  $x$  to a double-precision floating point value in round-up (to positive infinity) mode.

## `__device__ double __ll2double_rz (long long int x)`

Convert a signed 64-bit int to a double in round-towards-zero mode.

### Returns

Returns converted value.

### Description

Convert the signed 64-bit integer value  $x$  to a double-precision floating point value in round-towards-zero mode.

## `__device__ float __ll2float_rd (long long int x)`

Convert a signed integer to a float in round-down mode.

### Returns

Returns converted value.

### Description

Convert the signed integer value  $x$  to a single-precision floating point value in round-down (to negative infinity) mode.

## `__device__ float __ll2float_rn (long long int x)`

Convert a signed 64-bit integer to a float in round-to-nearest-even mode.

### Returns

Returns converted value.

### Description

Convert the signed 64-bit integer value  $x$  to a single-precision floating point value in round-to-nearest-even mode.

## `__device__ float __ll2float_ru (long long int x)`

Convert a signed integer to a float in round-up mode.

### Returns

Returns converted value.

**Description**

Convert the signed integer value  $x$  to a single-precision floating point value in round-up (to positive infinity) mode.

**\_\_device\_\_ float \_\_ll2float\_rz (long long int x)**

Convert a signed integer to a float in round-towards-zero mode.

**Returns**

Returns converted value.

**Description**

Convert the signed integer value  $x$  to a single-precision floating point value in round-towards-zero mode.

**\_\_device\_\_ double \_\_longlong\_as\_double (long long int x)**

Reinterpret bits in a 64-bit signed integer as a double.

**Returns**

Returns reinterpreted value.

**Description**

Reinterpret the bits in the 64-bit signed integer value  $x$  as a double-precision floating point value.

**\_\_device\_\_ double \_\_uint2double\_rn (unsigned int x)**

Convert an unsigned int to a double.

**Returns**

Returns converted value.

**Description**

Convert the unsigned integer value  $x$  to a double-precision floating point value.

## `__device__ float __uint2float_rd (unsigned int x)`

Convert an unsigned integer to a float in round-down mode.

### Returns

Returns converted value.

### Description

Convert the unsigned integer value  $x$  to a single-precision floating point value in round-down (to negative infinity) mode.

## `__device__ float __uint2float_rn (unsigned int x)`

Convert an unsigned integer to a float in round-to-nearest-even mode.

### Returns

Returns converted value.

### Description

Convert the unsigned integer value  $x$  to a single-precision floating point value in round-to-nearest-even mode.

## `__device__ float __uint2float_ru (unsigned int x)`

Convert an unsigned integer to a float in round-up mode.

### Returns

Returns converted value.

### Description

Convert the unsigned integer value  $x$  to a single-precision floating point value in round-up (to positive infinity) mode.

## `__device__ float __uint2float_rz (unsigned int x)`

Convert an unsigned integer to a float in round-towards-zero mode.

### Returns

Returns converted value.

**Description**

Convert the unsigned integer value  $x$  to a single-precision floating point value in round-towards-zero mode.

**\_\_device\_\_ double \_\_ull2double\_rd (unsigned long long int x)**

Convert an unsigned 64-bit int to a double in round-down mode.

**Returns**

Returns converted value.

**Description**

Convert the unsigned 64-bit integer value  $x$  to a double-precision floating point value in round-down (to negative infinity) mode.

**\_\_device\_\_ double \_\_ull2double\_rn (unsigned long long int x)**

Convert an unsigned 64-bit int to a double in round-to-nearest-even mode.

**Returns**

Returns converted value.

**Description**

Convert the unsigned 64-bit integer value  $x$  to a double-precision floating point value in round-to-nearest-even mode.

**\_\_device\_\_ double \_\_ull2double\_ru (unsigned long long int x)**

Convert an unsigned 64-bit int to a double in round-up mode.

**Returns**

Returns converted value.

**Description**

Convert the unsigned 64-bit integer value  $x$  to a double-precision floating point value in round-up (to positive infinity) mode.

## `__device__ double __ull2double_rz (unsigned long long int x)`

Convert an unsigned 64-bit int to a double in round-towards-zero mode.

### Returns

Returns converted value.

### Description

Convert the unsigned 64-bit integer value  $x$  to a double-precision floating point value in round-towards-zero mode.

## `__device__ float __ull2float_rd (unsigned long long int x)`

Convert an unsigned integer to a float in round-down mode.

### Returns

Returns converted value.

### Description

Convert the unsigned integer value  $x$  to a single-precision floating point value in round-down (to negative infinity) mode.

## `__device__ float __ull2float_rn (unsigned long long int x)`

Convert an unsigned integer to a float in round-to-nearest-even mode.

### Returns

Returns converted value.

### Description

Convert the unsigned integer value  $x$  to a single-precision floating point value in round-to-nearest-even mode.

## `__device__ float __ull2float_ru (unsigned long long int x)`

Convert an unsigned integer to a float in round-up mode.

### Returns

Returns converted value.

### Description

Convert the unsigned integer value  $x$  to a single-precision floating point value in round-up (to positive infinity) mode.

## `__device__ float __ull2float_rz (unsigned long long int x)`

Convert an unsigned integer to a float in round-towards-zero mode.

### Returns

Returns converted value.

### Description

Convert the unsigned integer value  $x$  to a single-precision floating point value in round-towards-zero mode.
